EDITING CONTROL UNIT

RM-G860E/SA-K66U

(RACK MOUNT KIT)

SPECIFICATIONS

Power	AC 102-240V, 50/60 Hz	Applicable VTRs	As players KR-M840E/KR-M820E/ KR-M800E/KR-M545E/ KR-M540E/PR-900E/ PR-600E
Power consumption	24W		Direct
Weight	4.8 kg		
Dimensions	430(W) x 99(H) x 311(D) mm		
Operating temperature	0°C to 40°C		
Storage temperature	-20°C to 60°C		
VTR control functions	PLAY, REC, FF, REW, STOP, PAUSE/STILL, SHUTTLE SEARCH, JOG, EJECT		As recorders KR-M840E/KR-M820E/ KR-M800E/PR-900E BR-S811E/BR-S810E
Editing control functions		SYNC IN	Direct or via SA-F911E
Edit modes	Assemble and Insert		
Editing reference	EBU time code or CTL pulse	GPI	0.2 to 5.0 Vp-p, negative sync, 75-ohms, unbalanced
Editing accuracy	Timecode-referenced in capstan bump mode ±0 frame (depending on VTR) CTL-referenced in capstan bump mode ±2 frames (depending on VTR)		Open-collector output
Memory capacity	1-event	Counter display	up to 23 hours, 59 minutes
Preroll time	5, 7, 10 sec		59 seconds, 24 frames (TC mode)
VTR interface	9-pin serial, 45-pin parallel	Time counter	from -9 hours to 9 hours, 59 minutes
Number of VTRs controllable	2 players and 1 recorder		59 seconds, 24 frames (CTL mode)
Number of VTRs connectable	4 players and 2 recorders	Display	Total/lap time, IN/OUT points, Servo, Duration, Split edit-point, AT speed, GPI output point, Errors, 9-pin users bits, counter memory
		Display elements	LED

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

●Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  symbol and shaded (■) parts are critical for safety.

Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.

Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

1) Insulation Tape	3) Spacers	5) Barrier
2) PVC tubing	4) Insulation sheets for transistors	

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

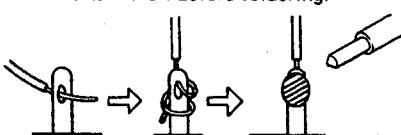

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

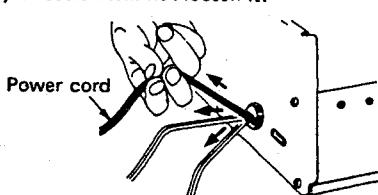

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) Connector part number : E03830-001

2) Required tool : Connector crimping tool of the proper type which will not damage insulated parts.

3) Replacement procedure

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

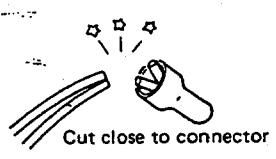

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

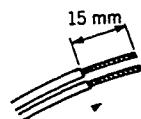

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

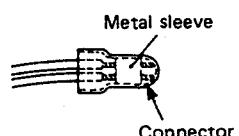

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

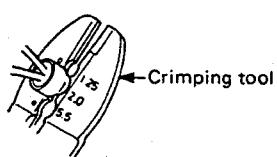

Fig. 6

(5) Check the four points noted in Fig. 7.

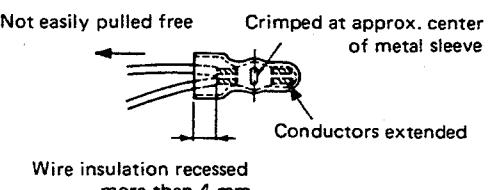

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

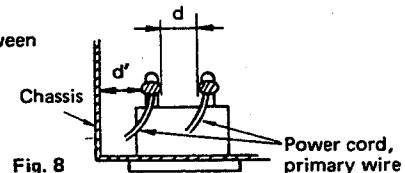

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

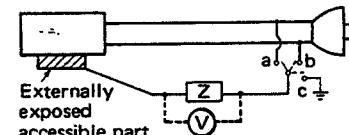

4. Leakage current test.

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z . See figure 9 and following table 2.

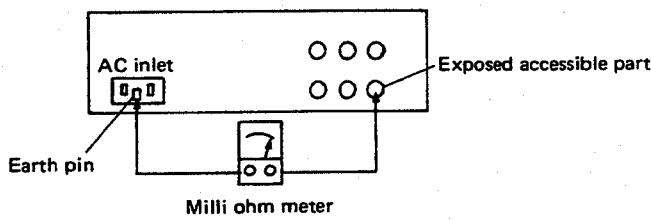

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	$Z \leq 0.1 \text{ ohm}$
Europe & Australia	$Z \leq 0.5 \text{ ohm}$

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	$R \geq 1 \text{ M}\Omega / 500 \text{ V DC}$	AC 1 kV 1 minute	$d, d' \geq 3 \text{ mm}$
100 to 240 V			AC 1.5 kV 1 minute	$d, d' \geq 4 \text{ mm}$
110 to 130 V	USA & Canada	—	AC 900 V 1 minute	$d, d' \geq 3.2 \text{ mm}$
110 to 130 V 200 to 240 V	Europe & Australia	$R \geq 10 \text{ M}\Omega / 500 \text{ V DC}$	AC 3 kV 1 minute (Class II)	$d \geq 4 \text{ mm}$
220 to 240 V			AC 1.5 kV 1 minute (Class I)	$d' \geq 8 \text{ mm} (\text{Power cord})$ $d' \geq 6 \text{ mm} (\text{Primary wire})$

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan	$\text{---} \text{---} \text{---} \text{---} \text{---}$	$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada	$0.15 \mu\text{F} \text{---} \text{---} \text{---} \text{---} \text{---}$	$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia	$\text{---} \text{---} \text{---} \text{---} \text{---}$	$i \leq 0.7 \text{ mA peak}$	Antenna earth terminals
		$2 \text{ k}\Omega \text{---} \text{---} \text{---} \text{---} \text{---}$	$i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current specifications for each region

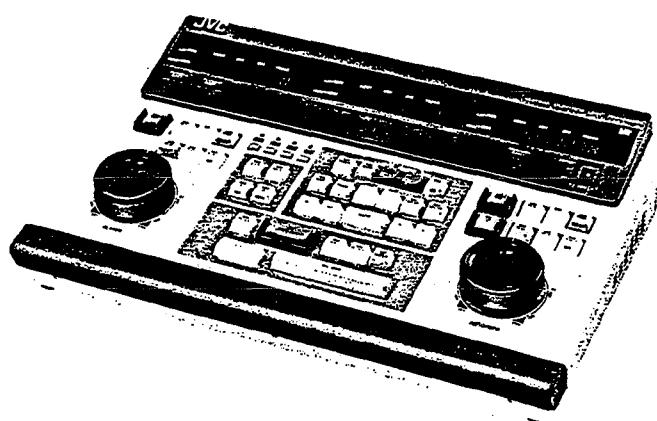

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

INSTRUCTIONS

JVC

RM-G860E

EDITING CONTROL UNIT

CONTENTS

POWER SYSTEM

This unit operates on voltage of 102 to 240 V AC with automatic switching.

This unit is produced to comply with Directives 76/88/EEC, 82/49/EEC and 87/308/EEC.

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION
 To prevent electric shock, do not open the cabinet. No user serviceable parts inside. Refer servicing to qualified service personnel.

Note: The rating plate and the safety caution are on the rear of the unit.

**Warning Notice
FOR YOUR SAFETY (Australia)**
 1. Insert this plug only into effectively earthed three-pin power outlet.
 2. If any doubt exists regarding the earthing, consult a qualified electrician.
 3. Extension cord, if used, must be three-core correctly wired.

**IMPORTANT (In the United Kingdom)
Mains Supply (AC 240 V~)
WARNING — THIS APPARATUS
MUST BE EARTHED**

The wires in this mains lead are coloured in accordance with the following code:
 GREEN-and-YELLOW: EARTH
 BLUE: NEUTRAL
 BROWN: LIVE
 As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows. The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the safety earth symbol $\frac{1}{\wedge}$ or coloured GREEN or GREEN-AND-YELLOW. The wire which is marked with the letter N or which is coloured BLACK, The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

FEATURES

Control over three VTRs

The RM-G860E is capable of remote-controlling two players and one recorder. All operations, including selection of the unit to be controlled, can be performed with the RM-G860E's control panel.

Serial and parallel remote control Interfaces

The built-in serial and parallel remote control interfaces make it possible to control the players and recorder via either 9-pin or 45-pin connectors. Even a system that includes both types of VTRs can be controlled with the VTRs retaining all capabilities including jog and shuttle search functions.

CTL- or timecode-referenced editing selectable

With 9-pin VTRs connected, either CTL or timecode counts can be selected for display on the time counters.

Colour frame editing

In 9-pin timecode-referenced editing, the RM-G860E performs colour frame editing based on colour frame information included in the 9-pin RS-422 signals. In 45-pin editing (including 9-pin editing via the SA-F911E Interface Unit), colour framing is controlled by the colour frame servos of the connected VTRs.

Auto colour frame shift and colour frame indication

In 9-pin timecode-referenced editing, the player's edit-in point is automatically shifted so that its colour frame matches that at the recorder's edit-in point. The degree of colour frame shift can also be indicated for manual correction.

Control over external equipment

The RM-G860E incorporates ports for controlling a video switcher and an audio mixer. GPI timing pulses are delivered to these external units to operate them in sync with VTRs.

Two search/jog dials

Two search/jog dials permit quick tape access on both player and recorder without having to switch dial function.

Three time counters

Separate time counters corresponding to each of the three VTRs permit quick location of edit points on each unit. These time counters display various kinds of data, including counter readings, edit points, total time, and lap time.

Simplified Auto Tracking editing

AT (Auto Tracking) playback is possible when VTRs equipped with Auto Tracking (AT) heads are used and controlled via the 9-pin connectors. Tape speed can be varied within the range permitted by the AT VTR. The RM-G860E registers the adjusted AT playback speed and controls the VTR at this exact speed in actual editing.

Audio-split editing

Audio edit-in points can be specified independently of video edit-in points. Entity points are determined in frames relative to the video edit-in points.

Time counter memory

In addition to edit-in and edit-out points, up to four counter readings can be temporarily held in memory. The stored counter data can be checked at any time by pressing the corresponding DA button, located by pressing the GOTO button, or transferred as edit-in or edit-out points.

Trimming function with recorder's jog dial

Edit duration, edit-in and edit-out points, audio edit-in point, and GPI pulse timing from the video switcher and audio mixer ports can all be set directly with the jog dial for the recorder.

Capstan bump function

The capstan bump function keeps the three VTRs in phase, ensuring high editing accuracy.

Preview, review and go-to functions

Preview, review and go-to functions are provided. The go-to function permits location both of edit points and of memorized counter reading points. Edit-in or edit-out points on all three VTRs can also be located with a single operation. In cut editing, in addition to normal preview, an edit-out preview function is available for confirmation of only the section across the edit-out point.

Error messages

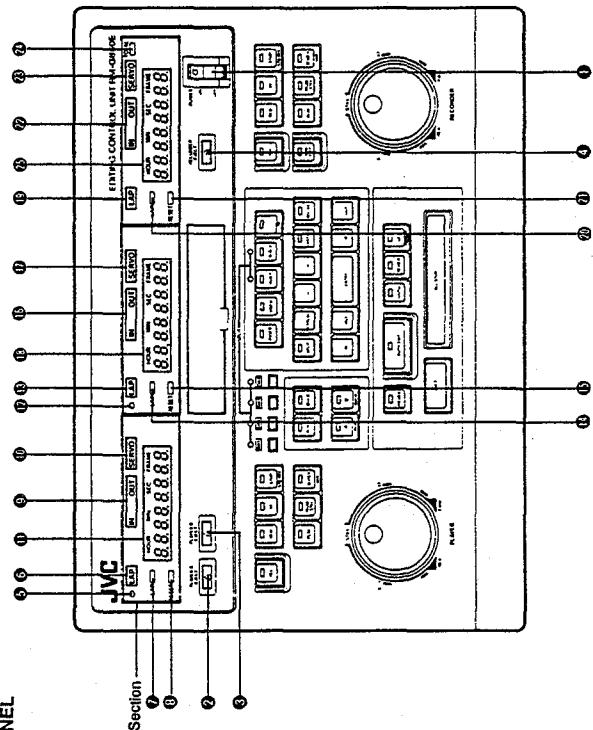

Warnings are available as error messages on the time counter display.

Last-edit display

Edit-point data for the previous edit can be displayed on the time counters.

Rack mounting
The RM-G860E can be installed in a standard 19" rack using the optional SA-K66U Rack Mount Adapter Kit.

CONTROLS AND CONNECTORS

FRONT PANEL

Display Section

POWER switch

PLAYER-A EJECT button

PLAYER-B EJECT button

RECODER EJECT button

① Player B Indicator
Lights when player B is selected with the A/B buttons on the Editing Control Section.

② LAP Indicator for player B
Lights when the Lap mode is selected with the LAP button.

③ LAP button for player B
With this button ON, the elapsed time is displayed from the edit-in point of either the current edit (if already entered) or the previous edit. The LAP indicator lights while the elapsed time is being displayed.

④ RESET button for player B
When the time counter is in the CTL mode, counter data, lap time and entered edit data can all be cancelled by pressing this button. In the TC mode, lap time and entered edit data can be cancelled.

⑤ IN/OUT indicators for player B
"IN" lights or blinks when edit-in point data is displayed and "OUT" lights or blinks when edit-out point data is displayed.

⑥ SERVO lock Indicator for player B
Lights when the VTR's drum servo and capstan servo systems are locked.

⑦ Counter display for player B
Indicates tape position and edit data, etc. in hours, minutes, seconds and frames for the VTR connected to the RECORDER connector on the rear panel (9-pin or 45-pin). Also displays error messages.

⑧ LAP button for recorder

⑨ IN/OUT indicators for recorder
With this button ON, the elapsed time is displayed from the edit-in point of either the current edit (if already entered) or the previous edit. The LAP indicator lights while the elapsed time is being displayed.

⑩ RESET button for recorder

⑪ IN/OUT indicators for recorder
When the time counter is in the CTL mode, counter data, lap time and entered edit data can all be cancelled by pressing this button. In the TC mode, lap time and entered edit data can be cancelled.

⑫ SERVO lock Indicator for recorder
Lights when the VTR's drum servo and capstan servo systems are locked.

⑬ Counter display for recorder
Indicates tape position and edit data, etc. in hours, minutes, seconds and frames for the VTR connected to the RECORDER connector on the rear panel (9-pin or 45-pin). Also displays error messages.

⑭ TOTAL button
When this button is pressed, the total time of executed edits from the initial time is displayed on the recorder's counter display. When the TOTAL button and the IN button for the recorder are pressed simultaneously, the initial time is indicated. When the TOTAL and COTO buttons are pressed simultaneously, the tape position corresponding to the initial time is accessed. Also, when the RESET button for the recorder and the TOTAL button are pressed simultaneously, the total time is reset. If no edit-in point is entered and the total time is not reset after setting the POWER switch to ON, the initial time will be the point where the TOTAL button is first pressed. If an edit-in point is entered before pressing the TOTAL button, the initial time will correspond to the edit-in point.

⑮ Counter display for recorder
Indicates tape position and edit data, etc. in hours, minutes, seconds and frames for the VTR connected to the RECORDER connector on the rear panel (9-pin or 45-pin).

⑯ POWER switch

⑰ Turning the power ON, make sure all external equipment has been connected.

⑱ PLAYER-A EJECT button

⑲ PLAYER-B EJECT button

⑳ RECODER EJECT button

⑳ RECODER EJECT button

⑴ POWER switch

⑵ Display Section

⑶ Player A Indicator
Lights when player A is selected with the A/B buttons on the Editing Control Section.

⑷ LAP Indicator for player A
Lights when the Lap mode is selected with the LAP button.

⑸ LAP button for player A
With this button ON, the elapsed time is displayed from the edit-in point of either the current edit (if already entered) or the previous edit. The LAP indicator lights while the elapsed time is being displayed.

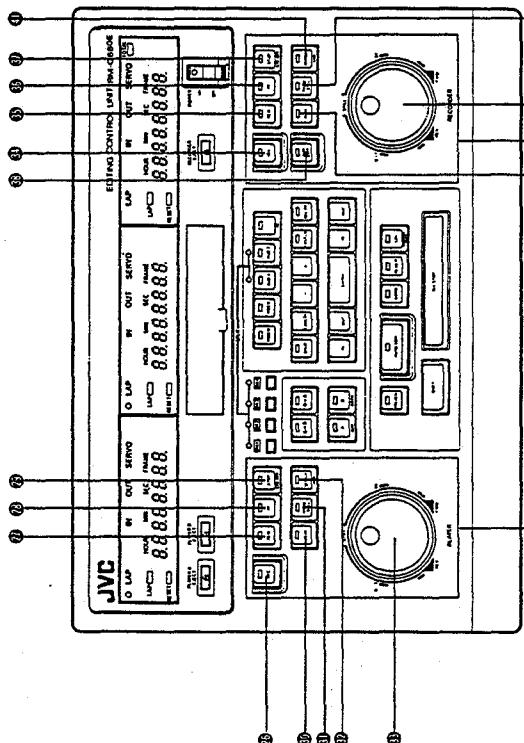

⑹ RESET button for player A
When the time counter is in the CTL mode, counter data, lap time and entered edit data can all be cancelled by pressing this button. In the TC mode, lap time and entered edit data can be cancelled.

⑺ IN/OUT indicators for player A
"IN" lights or blinks when edit-in point data is displayed and "OUT" lights or blinks when edit-out point data is displayed.

⑻ SERVO lock Indicator for player A
Lights when the VTR's drum servo and capstan servo systems are locked.

⑼ Counter display for player A
Indicates tape position and edit data, etc. in hours, minutes, seconds and frames for the VTR connected to the RECORDER connector on the rear panel (9-pin or 45-pin). Also displays error messages.

CONTROL PANEL SECTION

① PLAY button Press to start playback, or together with the REC button to start recording.

② PAUSE/STILL button Press to stop the tape temporarily during recording or playback. To release the Record/Pause or Still mode, press the PLAY button.

③ SEARCH/JOG button Press to set to ON for search operations using the SEARCH/JOG dial. The tape plays back at the speed set by the SEARCH dial as soon as the SEARCH button is pressed.

④ VARIABLE (SHIFT+SEARCH): Press together with the SHIFT button to enter the Variable speed mode. Using the SEARCH/JOG dial, playback speed can be varied between -1 and +2 times normal speed.

⑤ SEARCH/JOG dial This dial is constructed as two concentric controls; the outer control functions as a shuttle search dial and the inner one functions as a jog dial. Both are used to search for the desired playback picture. The JOG dial is also used to correct edit points, set audio edit-in points in audio-split editing, or to set GPI advance timing.

⑥ REC button Press together with the PLAY button ① to start recording. When the REC button is pressed on its own during playback, the input signal can be monitored.

⑦ REV button Press in the Stop mode to rewind the tape. When this button is pressed during playback, the high-speed search mode will be engaged.

⑧ FF button Press in the Stop mode to fast forward the tape. When this button is pressed during playback, the high-speed search mode will be engaged.

⑨ STOP button Press to stop the tape and enter the Stop mode (Standby On mode). The STOP and PAUSE/STILL indicators light. When controlled through a 45-pin connector, the VTR enters the Still mode.

⑩ STB OFF: (SHIFT + STOP) Press together with the Standby Off mode. In the STOP (PAUSE/STILL) mode, the indicator in the STOP + STOP pin connector, the VTR enters the Stop mode.

⑪ RUN EDIT button Press while in the Play mode together with the PLAY button to start manual editing.

⑫ PLAY button Press to start playback, or together with the REC button to start recording.

⑬ PAUSE/STILL button Press to stop the tape temporarily during recording or playback. To release the Record/Pause or Still mode, press the PLAY button.

⑭ STOP button Press to stop the tape and enter the Stop mode (Standby On mode). The STOP and PAUSE/STILL indicators light. When controlled through a 45-pin connector, the VTR enters the Still mode.

⑮ STB OFF: (SHIFT + STOP) Press together with the Shift or PAUSE/STILL button to enter the Standby Off mode. In the Standby Off mode, the indicator in the STOP (PAUSE/STILL) button will light. When controlled through a 45-pin connector, the VTR enters the Stop mode.

When these buttons are pressed, the functions indicated on the buttons are activated and their indicators light. To activate the function indicated on the front of a button, press the button while pressing the SHIFT button.

Example: STOP/STB OFF button

- Function on the button STOP button When pressed on its own, the STOP mode is engaged and the indicators in the STOP and PAUSE/STILL buttons light.
- Function on the front of the button STB OFF button When pressed together with the Shift button, the Standby-Off mode is engaged and the indicator in the STOP button lights.

Stop mode in this manual refers to the Standby On mode, a status in which the tape stops but remains in the loaded position.

④ **Audio signal SPLIT button**
To set the edit-in point of the audio signal independently of the edit-in point of the video signal. The audio edit-in point can be specified in frames relative to the video edit-in point by turning the JOG dial for the recorder while the SPLIT button is depressed. Edit-point data is entered by pressing the SPLIT button together with the ENTRY button ⑩.

⑤ **CANCEL button**
To clear entered data from memory (edit points, audio-split edit points, GPI advance timing and counter data). Press the IN/OUT buttons ⑨ ⑩ the SPLIT button ④, the GPI ADVANCE button ⑩, or DA buttons ⑪ together with the MINUS (-)/PLUS (+) buttons ⑫.

⑥ **MINUS (-)/PLUS (+) buttons**
By pressing either button while the IN or OUT button is depressed, an entered edit point can be shifted frame by frame in the corresponding direction. When either button is pressed on its own, the IN or OUT indicators in the three time counters blink and the edit-in or -out points of the three VTRs are displayed. When the CANCEL button is pressed while either button is depressed, the edit-in or -out points of the three VTRs are cleared from memory simultaneously. Also, when the ENTRY button is pressed while either button is depressed, the readings of the three time counters are cleared simultaneously as edit-in or -out points. When the GOTO button is pressed while either button is depressed, the edit-in or -out points of all the VTRs are accessed. When the Minus (-) and Plus (+) buttons are pressed simultaneously, the IN and OUT indicators in the three time counters blink, and the durations between the edit-in and edit-out points are displayed.

⑦ **LAST ED button**
Press to recall the edit point data of the previous edit. When this button is pressed, the edit point data of the edit executed last is displayed on the time counter. When pressed again, the edit point data of the current edit is displayed.

⑧ **AUX (SHIFT+A):** (Press together with the SHIFT button to select player B.)
The VTR used as the recorder can be used to edit from external sources, independently from the players connected to the RM-G80E.

⑨ **SPLIT Indicators**
The corresponding indicator lights when an audio edit-in point is entered in audio-split editing. See page 33.

⑩ **DA buttons (DA1 to DA4)**
Press to temporarily store time counter readings in memory. The stored time counter readings can be called up and used as edit points. Effective only for the players. See page 37.

⑪ **Be careful! If DIP switch SW2-1 is set ON, time counter readings are not stored in memory.**

⑫ **A/B roll select buttons**
To specify the order of playback between two playback VTRs in A/B roll editing.
A → B:
Player A starts playback first, followed by player B.
B → A:
Player B starts playback first, followed by player A.
If the order of playback is not selected, editing can be done between the player selected with the A/B select buttons ⑬ and the recorder.

⑬ **Player A/B select buttons**
To select the player to be controlled via the player control section.

⑭ **A button (M/AUX)**
To select player A.

⑮ **ENTRY button**
To store edit points and time counter data in memory. When this button is pressed together with the IN or OUT button, an edit-in or edit-out point is entered. After selecting the player using the A or B select button, press the ENTRY button together with one of the DA buttons to store the current time counter data in memory.

⑯ **IN/OUT buttons for recorder**
See ⑨. In addition, the IN/OUT buttons for the recorder can also be used with the JOG dial for the recorder, to shift edit points, or to modify the duration of the edit. Turn the JOG dial while pressing either the IN or OUT button, or while pressing both the IN and OUT buttons, respectively.

⑰ **PREVIEW button**
To start rehearsal editing. If this button is pressed again during rehearsal editing, rehearsal editing will start again from the beginning.

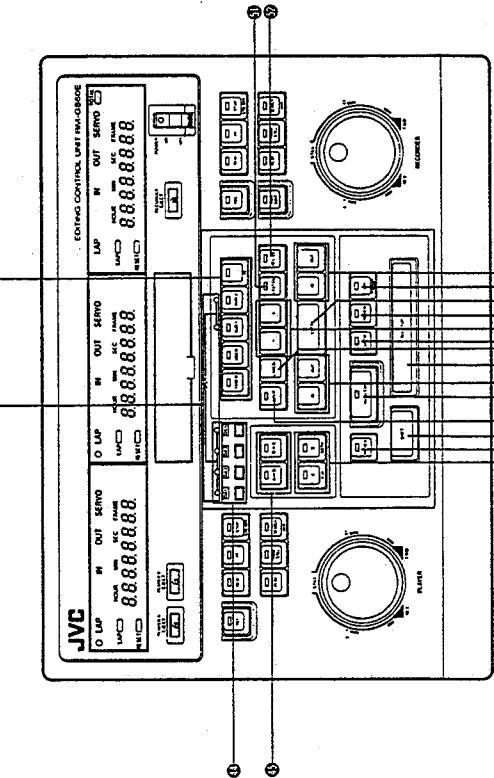

⑱ **AUTO EDIT button**
After the edit points have been determined, press this button to start actual editing. If this button is pressed during preview editing, actual editing will start. If pressed again during actual editing, editing will start again from the beginning.

⑲ **GOTO button**
Press together with the appropriate button(s) to access specified tape positions.

⑳ **REVIEW button**
To review the executed edit.

㉑ **GPI ADVANCE button**
To set the GPI pulse output timing independently of the edit-in point. By turning the JOG dial for the recorder while pressing this button, the GPI pulse output time can be set in frames relative to the edit-in point. When this button is pressed together with the SHIFT button, a "manual take" pulse is output from the GPI port. During A/B roll editing, if this button is pressed together with the SHIFT button before the preset pulse output time has been reached, the pulse will be output immediately and not be at the preset time.

㉒ **ALL STOP button**
Press this button together with an operation button to stop all the VTRs. The VTRs controlled by 9-pin remote control signals will enter the Stop mode and those controlled by 45-pin remote control signals will enter the Still mode.

Editing Control Section

㉓ **AUX (SHIFT+A):** (Press together with the SHIFT button to select player B.)
① Used to control players A and B simultaneously.

㉔ **BOTH (SHIFT+B):** (Press together with the SHIFT button to select player B.)
② **Edit mode select buttons**
To select either the Assemble or Insert Edit mode and the signal(s) to be inserted (video, audio-1, audio 2, time code). Set these buttons before starting preview editing or actual editing.
ASSEM: To assemble-edit the video, audio-1, audio-2, and time code (if available) signals.
AUD-1: To insert-edit the audio-1 signal.
AUD-2: To insert-edit the audio-2 signal.
VIDEO: To insert-edit the video signal.
These three insert buttons can be used in any combination by pressing them ON. The LEDs above the AUD-1 and AUD-2 buttons light when the corresponding signal is assigned for split-editing.
③ **Player A/B select buttons**
To select the player to be controlled via the player control section.
A: To select player A.

㉕ **Editing Control Section**
④ **SPLIT Indicators**
The corresponding indicator lights when an audio edit-in point is entered in audio-split editing. See page 33.

㉖ **DA buttons (DA1 to DA4)**
Press to temporarily store time counter readings in memory. The stored time counter readings can be called up and used as edit points. Effective only for the players. See page 37.

㉗ **Be careful! If DIP switch SW2-1 is set ON, time counter readings are not stored in memory.**

㉘ **A/B roll select buttons**
To specify the order of playback between two playback VTRs in A/B roll editing.
A → B:
Player A starts playback first, followed by player B.
B → A:
Player B starts playback first, followed by player A.
If the order of playback is not selected, editing can be done between the player selected with the A/B select buttons ⑬ and the recorder.

㉙ **Player A/B select buttons**
To select the player to be controlled via the player control section.

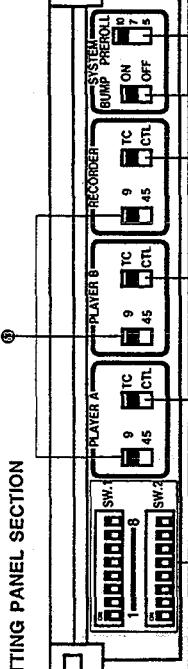

㉚ **A button (M/AUX)**
To select player A.

㉛ **Editing Control Section**
① **IN/OUT buttons for players**
Press to monitor the recorder's input signal on a TV monitor connected to the recorder. See page 39.

㉜ **REC E/E button**
Press to record the recorder's output signal on a VTR.

㉝ **Editing Control Section**
② **IN/OUT buttons for players**
When either button is pressed on its own, the corresponding IN or OUT indicator blinks and the edit-in or -out point is indicated on the time counter. When either button and the ENTRY button are pressed simultaneously, an edit-in or -out point is entered; when pressed together with the CANCEL button, the edit-in or -out point is cleared. Press the Minus (-) or Plus (+) button together with the IN or OUT button to shift the entered edit-in or -out point frame by frame in the corresponding direction.
When the IN and OUT buttons are pressed simultaneously, the IN and OUT indicators in the corresponding time counter blink, and the duration of the edit is displayed. If the GOTO button is pressed with the IN or OUT button depressed, the edit-in or -out point of the corresponding VTR is accessed.

SYSTEM SETTING PANEL SECTION

③ 45-pin remote control system select switches

Select the remote control systems depending on the types of VTRs connected.
45: for VTRs with a 45-pin remote control interface
9: for VTRs with a 9-pin remote control interface

④ TCI/TC1 select switches

TC1: Counts and indicates the CTL signals recorded on the tape. The counter display can be reset by pressing the RESET button.
Indicates the line codes read by the 9-pin remote control system. The time code display cannot be reset by pressing the RESET button.

⑤ SYSTEM BUMP ON/OFF switch

ON: Capstan bump function controls tape running for highly accurate editing.

OFF: No capstan bump function.

With the BUMP switch ON, the three VTRs run in phase.

⑥ SYSTEM PREROLL time select switch SW2-1

Precall times of 5 seconds, 7 seconds and 10 seconds can be selected. Prerecall times of 10 seconds can be changed to 15 seconds by setting DIP switch SW1-5 ② to ON. The capstan bump function does not operate with prerecall times of 5 seconds.

NOTE:
● When using the SA-F911E Interface Unit, set the preroll time to 10 seconds or longer.

⑦ System setup DIP switches

To change the factory preset functions of the editing system. Prior to shipment, all switches are set to OFF (down).
⑧ System setting panel section

To select the colour framing mode (telecine in 9-pin editing).

SW2-5

2-field mode

4-field or 8-field mode

To select the same-duration edit function (in which the OUT point is automatically registered as the IN point of a new edit, and the OUT point of a new edit is also automatically registered with respect to that IN point so that the duration is the same as that of the previous edit)

SW2-6

Same-duration edit function OFF

Same-duration edit function ON

SW2-7

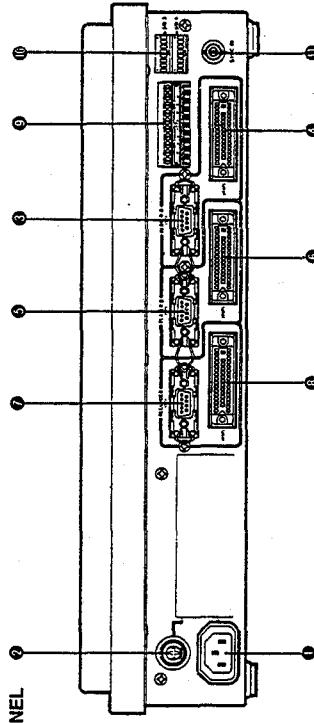

With TBC
Without TBC

To defeat the auto colour frame shift function in insert editing.

SW2-8

Auto colour frame shift ON
Auto colour frame shift OFF

REAR PANEL

No.	Function
①	AC IN connector Connect to a 102 — 240 V AC 50/60 Hz outlet.
②	FUSE holder
③	8-pin remote connector for player A
④	45-pin remote connector for player A
⑤	8-pin remote connector for player B
⑥	45-pin remote connector for player B
⑦	8-pin remote connector for recorder
⑧	45-pin remote connector for recorder
⑨	Connect the recorder and players A and B with optional 45-pin cable or 9-pin cables.
⑩	GPI/1/GPI/2 connection ports
⑪	Output pulses to start video switcher and audio mixer effects. See page 15.
⑫	DIP switches for additional functions Prior to shipment, all switches are set to OFF (down).

- SW4-8 Selects the time tracking function. (With the time tracking function ON, if the recorder's IN point automatically registers at the OUT point of the previous edit, the player's IN point is also shifted accordingly.)

NOTE:

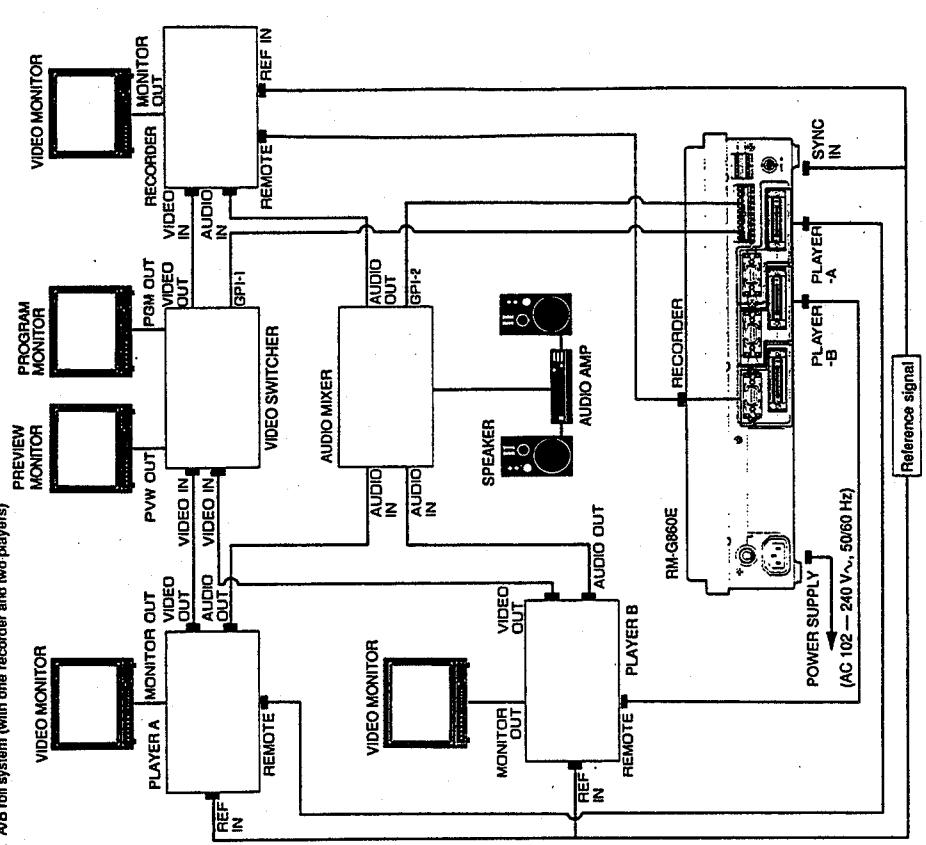

- SW4-5/SW4-7 must be set to OFF when not using the KR-M800E/PR-900E.
- ① SYNC IN connector
Accepts a reference signal for synchronization. A composite sync signal or a composite video signal can be input as the reference signal.

CONNECTIONS

1. Basic system (with one recorder and one player)

2. A/B roll system (with one recorder and two players)

NOTES:

- When using the SA-F911E Interface Unit: set the SA-F911E DIP switch SW2-8 to ON and SW2-7 to OFF. Set the RM-G860E's edit-in liming to -2 frames. If a TBC is also used, set the RM-G860E's system setting panel DIP switch SW2-7 to ON.
- With S-VHS machines, set the pre-roll time to 10 seconds or longer. With component machines, set the pre-roll time to 7 seconds or longer.

NOTES:

- When an external sync signal is not supplied, there may be an error of ±1 frame in terms of editing accuracy.

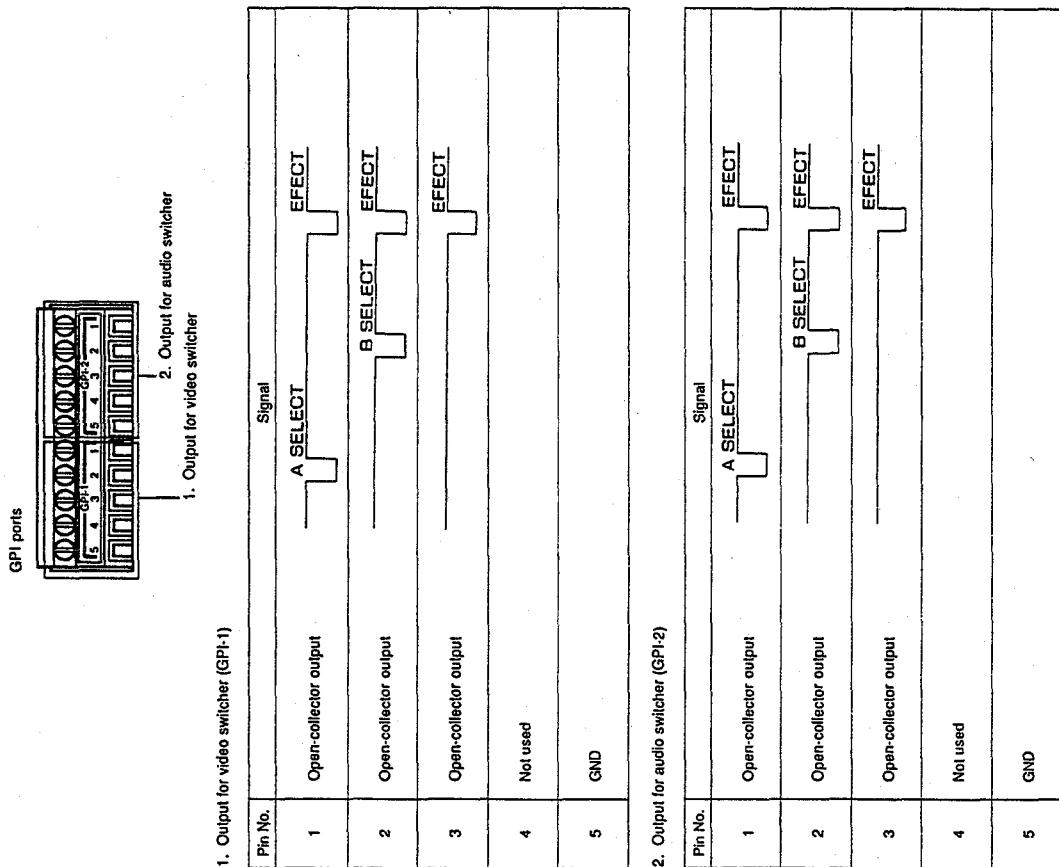

In A/B roll editing with the MI-F10E, the audio signal selected on the PROGRAM bus can be automatically switched to the one selected on the PRESET bus.

- When using players with no built-in TBC, connect a TBC.
- Do not attempt to reset the REMOTE/LOCAL switch at intervals shorter than one second.

In A/B roll editing with the MI-F10E, the audio signal selected on the PROGRAM bus can be automatically switched to the one selected on the PRESET bus.

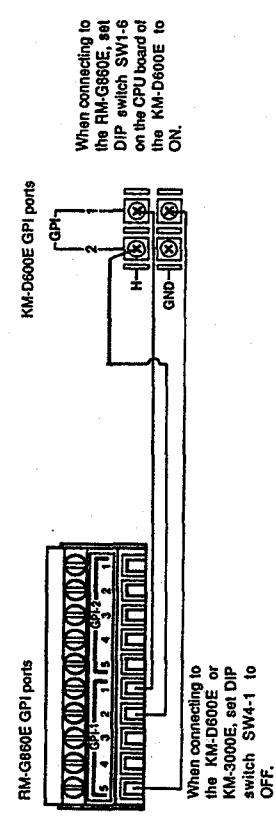

- This switching is not linked with selection of the player with the A/B select buttons. Before executing A/B roll editing, select the audio signals on the PROGRAM and PRESET buses manually with the MI-F30E. For more details refer to the instruction manual of the MI-F30E.

GPI PORTS

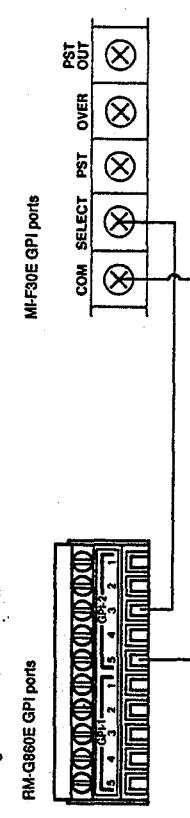

Connection Example

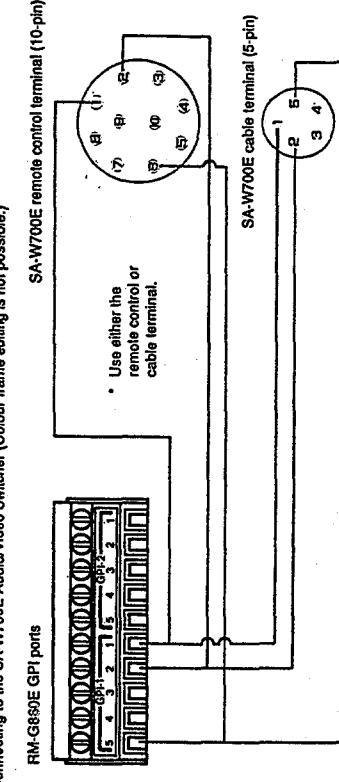

● Connection to the KM-D600E Y/C Digital Effects Generator

● Connecting to the MI-F30E Audio Fader

● Connecting to the SA-W700E Audio/Video Switcher (Colour frame editing is not possible.)

The MI-F30E Audio Fader is the only unit currently usable with GPI-2, and the only possible function is execution of effects.

PREPARATION

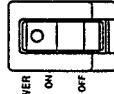

PREPARING VTRs

Prepare VTRs as players and recorder as follows:

1. Set their power switches to ON.
2. Set their REMOTE/EILOCAL switches to REMOTE (9-pin/45-pin).
3. Load the required cassette tapes.
4. Perform necessary adjustments to the players. (Tracking, Audio signal playback level, etc. Set the FRAME SERVO switch to FRAME or 2F.)
5. Perform necessary adjustments to the recorder. (Input select switch, Video/Audio signal recording level, etc. Set the FRAME SERVO switch to COLOUR FRAME.)

PREPARING THE RM-G860E

1. Set the POWER switch to ON.

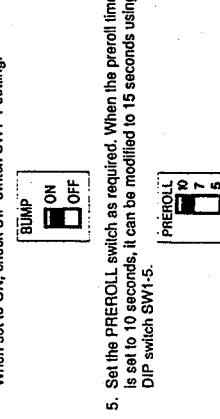

2. Set the 45/9 (45-pin/9-pin) switches according to the VTRs connected.

3. Set the TC/CTL switches according to the reference signal used by each VTR's time counter. Normally set to TC; set to CTL if 45-pin is selected or line codes are not to be used with 9-pin selected. When the switch is set to TC, the user bits can be checked during playback by pressing the button with TC on its front.

4. Set the BUMP switch to ON or OFF. When set to ON, check DIP switch SW1-1 setting.

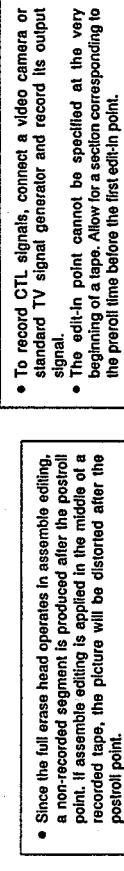

5. Set the PREROLL switch as required. When the preroll time is set to 10 seconds, it can be modified to 15 seconds using DIP switch SW1-5.

PREPARING RECORDING TAPES

For Assemble Edits

When starting assemble editing from the beginning of a tape, or after a blank in the middle of tape, CTL signals must be recorded before the first edit-in point for a period exceeding the preroll time.

- To record CTL signals, connect a video camera or standard TV signal generator and record its output signal.
- The edit-in point cannot be specified at the very beginning of a tape. Allow for a section corresponding to the preroll time before the first edit-in point.
- Postroll time

- Since the full erase head operates in assemble editing, a non-recorded segment is produced after the preroll point. If assemble editing is applied in the middle of a recorded tape, the picture will be distorted after the preroll point.
- Preroll time

It takes a few seconds for tape running to stabilize after starting. To ensure that tape running is stable before it reaches an edit point, the tape must start running before the edit-in point (prerolling). The preroll time can be set with the preroll time select switch.

PREPARING SYSTEM EQUIPMENT (for A/B roll editing)

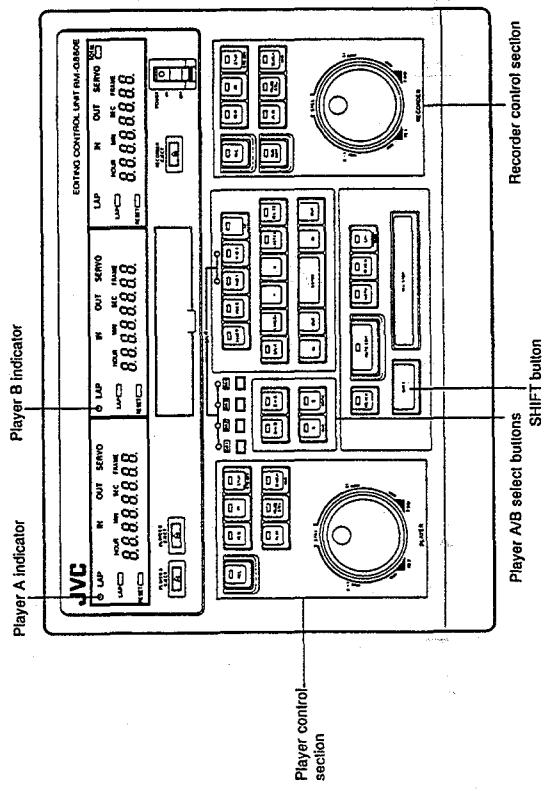

To perform A/B roll editing, the two players' playback signals must be synchronized. When a special effects generator is used, each of the players should be connected to it through a line base corrector (TBC). Adjust the TBCs to match the phase of both players' playback signals. The subcarrier phase in particular may need to be adjusted as it is affected by the length of the connection cables.

SETTING THE SPECIAL EFFECTS GENERATOR (for A/B roll editing)

- ① Select the type of effect to be used when switching the source. When a wipe effect is selected, select the WIPE pattern with the WIPE pattern select button, and set the WIPE position when the special effects generator has a positioner control.
- ② Set the required transition time for source switching.
- For more details refer to the instruction manual of the SEG.

REMOTE CONTROL OF PLAYERS AND RECORDER

The functions of the buttons and dials on the player and recorder control sections are identical to the corresponding buttons and dials on the connected VTRs.

SEARCH CONTROL

The functions of the buttons and dials on the player and recorder control sections are identical to the corresponding buttons and dials on the connected VTRs.

SEARCH CONTROL

Use the SEARCH button, SEARCH + SHIFT buttons, and JOG/SEARCH dials.

Shuttle Search

Auto Tracking (AT) Playback

- Turn the SEARCH dial (the outer dial). Continuous search is available in both directions, at a speed corresponding to the degree the dial is turned. Use to roughly locate edit points.
- When the dial is set to the center position (STILL), a still picture can be obtained.
- To run the tape in the forward direction, turn the dial in the FWD direction (clockwise); to run the tape in the reverse direction, turn the dial in the REV direction (counter-clockwise).
- When the SEARCH button is pressed, playback will resume at the speed already set by the SEARCH dial.
- When the dial is set to the x1 or x1+click position, search will be at normal speed. When the SEARCH dial is set to the x1 click position, the internal sync mode is entered automatically.

- After setting the POWER switch to ON, pressing the SEARCH button may not engage the Search mode. In this case, turn the SEARCH dial fully in both directions to restore normal conditions.
- To cancel the Search mode, press either PLAY, PAUSE/STILL, FF, REW, STOP, or ALL STOP.

SELECTION OF THE VTR TO BE CONTROLLED

- Before starting, select the player with the A or B button.
- When player A is selected, the LED in the A button and the player A indicator light. When player B is selected, the LED in the B button and the player B indicator light.

TAPE TRANSPORT CONTROL

For tape transport control, the following buttons in the corresponding section are used.

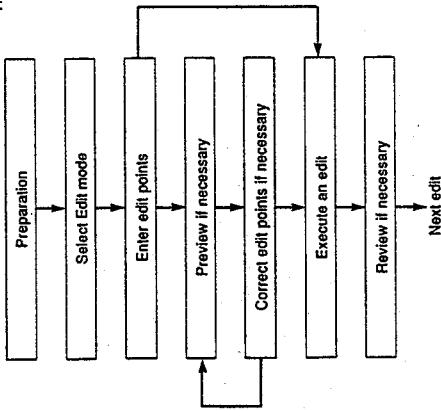

PLAY	: to play back tape	PAUSE/STILL	: to stop recording temporarily or freeze a picture
FF	: to fast forward tape	SHIFT+STOP	: standby off
REW	: to rewind tape	REC + PLAY	: to record
STOP	: to stop tape		

BASIC EDITING (CUT EDITING)

One player and one recorder are used for cut editing.

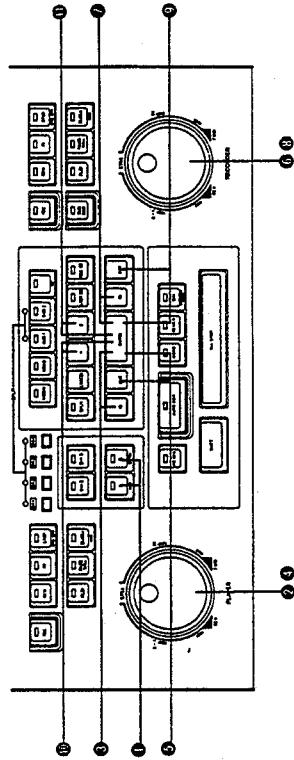

OPERATING FLOWCHART

Refer to page 17 "PREPARATION".

ENTRY OF EDIT POINTS

In assemble editing, enter the player's edit-in and -out points and the recorder's edit-in point. In insert editing, enter the edit-in points for the player and recorder and the edit-out point for either the player or the recorder. The other edit-out point is determined automatically.

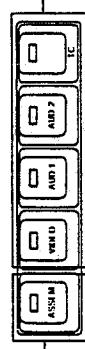

Entering Player's Edit Points

- ① Select player A or B with the A or B button.
- ② Locate the edit-in point, and engage the Still mode.
- ③ Press the ENTRY button while pressing the IN button for the player. The IN indicator in the line counter lights and the OUT indicator blinks.
- ④ Locate the edit-out point, and engage the Still mode.
- ⑤ Press the ENTRY button while pressing the OUT button for the player. The OUT indicator in the line counter lights.

SELECTING THE TYPE OF EDITING

Edit mode select buttons

Assemble Editing

To perform assemble editing, press the ASSEM button. Its indicator will light when ON. Once editing has started, the button is disabled. In the Assemble Edit mode, all signals (AUD-1, AUD-2, VIDEO, Time code) are recorded.

Insert Editing

To perform insert editing, select the signal(s) to be inserted (VIDEO/AUD-1/AUD-2) by pressing the corresponding INSERT buttons. The buttons' indicators light when ON. To insert time code signals, press the SHIFT button and TC button (to the right of the AUD-2 button) simultaneously. During insert editing, any signals can be set to ON or OFF whenever necessary.

Simultaneous Entry of Edit Points for Player and Recorder

A single operation lets you enter the edit points for both the player and recorder.

- ① To enter the edit-in points for both player and recorder at the same time, press the Minus (-) and ENTRY buttons simultaneously. The IN Indicators in the line counters will light.
- ② To enter the edit-out points for both player and recorder, press the Plus (+) and ENTRY buttons simultaneously. The OUT Indicators in the line counters will light.

If the edit-in points for the player and recorder have already been entered, there is no need to enter the recorder's edit-out point. Edit points can be entered while in the Play mode or in the Search mode.

NOTE:
In 9-pin linecode-referenced editing, the last dot on the player's counter display lights if the colour frames at the recorder's and player's edit-in points do not match. To find out how many frames must be shifted for the colour frames to match, press the player IN button. The other player's display shows the colour frame shift in frames while the IN button is being pressed. Correct either the players or recorder's edit-in point so that the indicated number of frames is "00". For correcting edit points, see page 25.

Confirmation of Edit Points and Duration

<Confirming edit-in points>

- To confirm the counter data of the edit-in point, press the IN button for the player or the recorder as necessary. The corresponding IN Indicator will blink and the data will be displayed for as long as the IN button is pressed.
- The edit-in points for both the player and recorder can be confirmed at the same time by pressing the Minus (-) button.

<Accessing edit-in points>

- The edit-in point can be accessed by pressing the IN button while pressing the GOTO button.
- The edit-in points for both the player and recorder can be accessed at the same time by pressing the Plus (+) and GOTO buttons simultaneously.

<Confirming edit-out points>

- The edit-out point can be accessed by pressing the OUT button while pressing the GOTO button.
- The edit-out points for both the player and recorder can be accessed at the same time by pressing the Minus (-) and GOTO buttons simultaneously.

<Accessing edit-out points>

- If an edit-out point is specified at a point before the edit-in point, the edit-in point is automatically cancelled. If an edit-in point is specified at a point after the edit-out point, the edit-out point is automatically cancelled.
- As the duration of the player's edit and that of the recorder's edit are always equal, entering the edit-in points for the player and recorder and the edit-out point for either the player or recorder is sufficient; the other edit-out point is determined automatically.
- Using the time counter memory, counter data can be temporarily held in memory and then entered as an edit-in or edit-out point. See page 37, "TIME COUNTER MEMORY FUNCTION".

<Confirming the duration of edits>

- To confirm the duration of an edit, press the IN and OUT buttons simultaneously. The IN and OUT Indicators blink and the duration of the edit is indicated.
- To confirm the durations of the edits for both the player and the recorder, press the Minus (-) and Plus (+) buttons simultaneously.

PREVIEW EDITING

Rehearsal editing can be performed using the preview function. The edited sequence can be "rehearsed" to ensure the edit-in and edit-out points are appropriate. In practice, however, this step can be omitted.

Out-Point Preview

① Set both the player and recorder to the Still mode.

② Press the PREVIEW button. Both the player and recorder start to run as they would in actual editing. The picture can be monitored on the monitor connected to the recorder. (The video and audio signals of the edit are monitored in the E-E mode.)

To Quit Preview

③ To quit during preview editing, press the ALL STOP button.

④ When the PREVIEW button is pressed during preview editing, preview editing restarts from the beginning.

CANCELLATION AND CORRECTION OF EDIT POINTS

Access to Edit Points

<Accessing edit-in points>

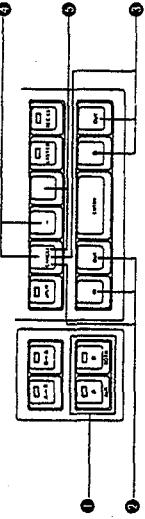

- To access the IN point can be accessed by pressing the IN button while pressing the GOTO button.
- The edit-in points for both the player and recorder can be accessed at the same time by pressing the Minus (-) and GOTO buttons simultaneously.

<Accessing edit-out points>

- The edit-out point can be accessed by pressing the OUT button while pressing the GOTO button.
- The edit-out points for both the player and recorder can be accessed at the same time by pressing the Minus (-) and GOTO buttons simultaneously.

<Confirming Edit Points>

Entering a new edit point automatically cancels the previous edit point. To cancel an edit point without entering a new one, proceed as follows:

① 

<Simultaneous cancellation of edit-out points>

⑤ The edit-out points for both the player and recorder are cancelled simultaneously when the Plus (+) and CANCEL buttons are pressed simultaneously. The OUT Indicators will go out.

<Simultaneous cancellation of edit-in points>

⑥ Select the player with the A or B select button.

⑦ To cancel an edit-in or edit-out point, press the IN or OUT button and the CANCEL button simultaneously. The IN or OUT Indicator will go out.

<Simultaneous cancellation of edit points>

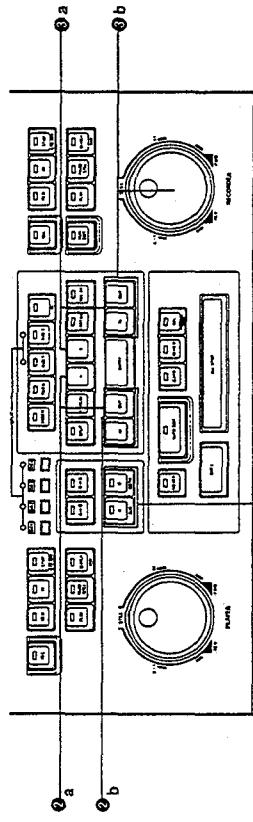

⑧ To cancel an edit-in or edit-out point, press the IN or OUT button and the CANCEL button simultaneously. The IN or OUT Indicator will go out.

<Simultaneous cancellation of edit-in points>

⑨ The edit-in points for both the player and recorder are cancelled simultaneously when the Minus (-) and CANCEL buttons are pressed simultaneously. The IN Indicators will go out.

RESET 

Correction of Edit Points

<Correcting player's edit points>

- ① Select the player with the A or B button.
- ② To shift edit points frame by frame, press the Minus (-) or Plus (+) button with the IN or OUT button depressed.
- ③ This can also be done by turning the JOG dial on the recorder control section while pressing the IN or OUT button.

<Colour frame correction>

- ① Select the player with the A or B button.
- ② Press the player IN button.
- ③ If the last dot on the player's counter display lights, the player's and recorder's colour frames do not match.
- ④ The colour frame shift is indicated in frames on the other player's display while the IN button is being pressed.

- ⑤ Shift the player's or recorder's edit-in point so that the indicated number of frames is "00".
- ⑥ Check the picture at the corrected edit-in point. If it is not suitable as the start of a new edit, search for another tape position and check colour frame matching.

<Correcting recorder's edit points>

- ① To shift edit points frame by frame, press the Minus (-) or Plus (+) button with the IN or OUT button depressed.
- ② This can also be done by turning the JOG dial while pressing the IN or OUT button.

NOTE:
• If the number of edits is too many, set system setting panel DIP Switch SW1-1 to ON.

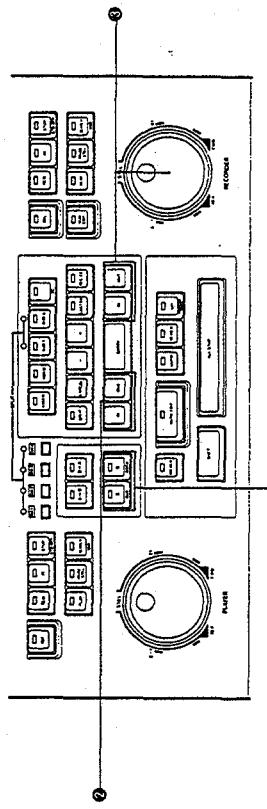

REVIEW

This procedure can be omitted if unnecessary.

- ① Press the REVIEW button.
- ② The recorder rewinds the tape past the edit-in point, then starts playback. After it has passed the edit-out point, it enters the Still mode.
- ③ The Review mode is released automatically 5 seconds after the edit-out point.

Correcting the duration of edits

This technique is convenient when the time of an edit is limited, especially in insert editing. The duration is modified by changing the edit-out point. Since the duration of an edit is identical for both the player and recorder, only one has to be modified.

<Correcting player's edit duration>

- ① Select the player with the A or B button.
- ② Turn the JOG dial on the recorder control section while pressing both the IN and OUT buttons.

- ① To release the Review mode before the edit-out point:
- ② Press the ALL STOP button. The recorder enters the Still mode.

A/B ROLL EDITING

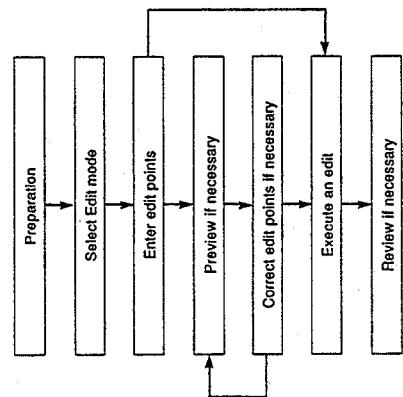

A/B roll editing refers to editing from two players with automatic switching between the two.

Note on edit-out points

If the edit-out points are entered for both the recorder and player B and there is any discrepancy between them, the one entered last will be used to correct the other.

OPERATING FLOWCHART

Refer to page 17 "PREPARATION".

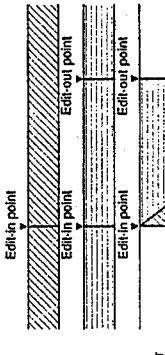

To apply special effects manually

A "manual take" pulse can be output from the GPI port at any time after the start of an edit by simultaneously pressing the GPI ADVANCE (MANUAL TAKE) and SHIFT 1 buttons. In this case, the preset pulse output time is cancelled.

To apply special effects at the start of an edit

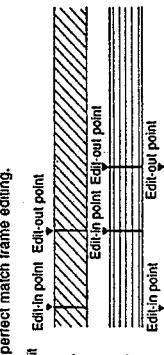

(player A in the figure below). When editing is started, special effects will be applied at the start of the edit as the edit-in point of player A is treated also as its edit-out point. That is, the duration of an edit specified for player A is zero.

The duration of edits of player B and recorder must be identical, or the edit-out point for the recorder should not be entered.

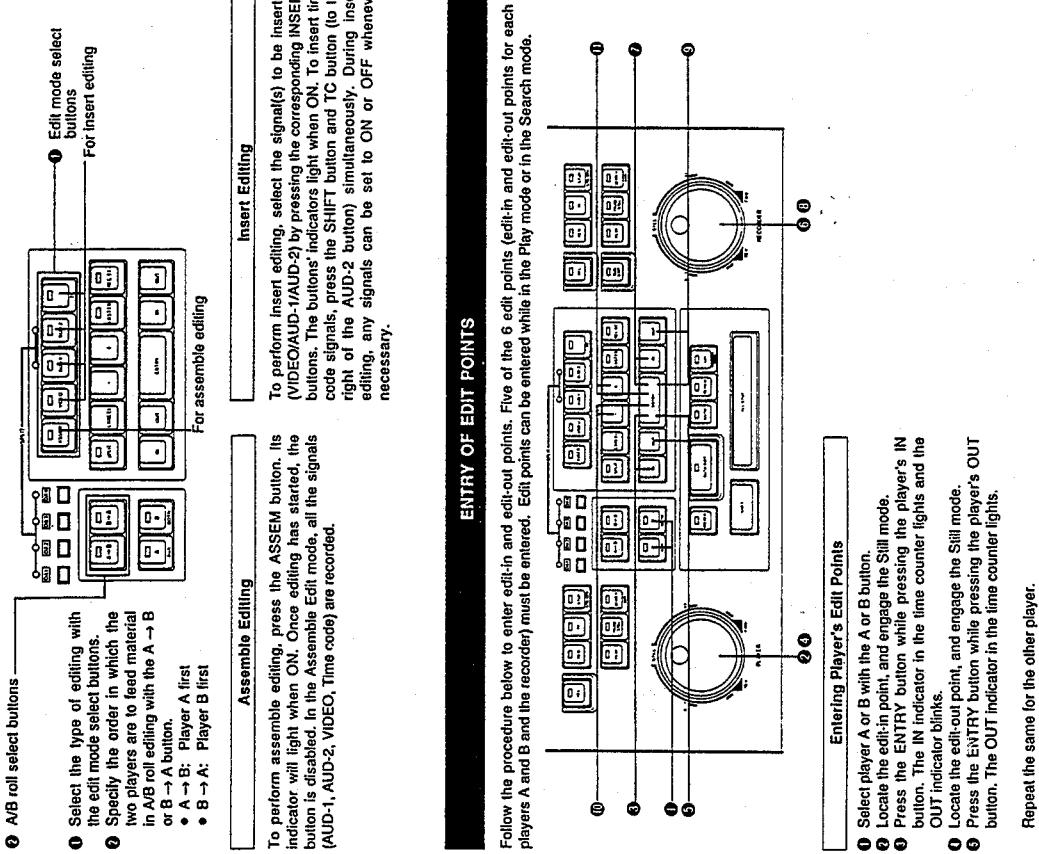

Match frame editing

More efficient A/B roll editing is possible when rear panel DIP switch SW4/8 is set to ON. On completion of one A/B roll edit, the recorder's edit-out point and the second player's (player B in this example) edit-in point are automatically registered as the edit-in points for the next edit. At the same time, the sequence of players is also automatically reversed (B → A, in this example). Therefore, match frame editing is possible simply by setting the edit-in and -out points of the other player, which now functions as the second player (player A in this example). And, thanks to the auto time tracking function, the first player's (player B in this example) edit-in point will be automatically shifted if the recorder's edit-in point is corrected, ensuring perfect match frame editing.

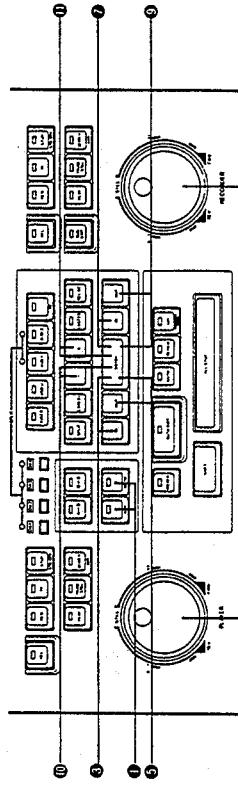

The GPI pulse output point is determined automatically. If you wish to change the timing of the GPI pulse output, refer to page 38, "GPI PULSE OUTPUT TIMING AND MANUAL TAKE PULSE OUTPUT".

SELECTING THE TYPE OF EDITING AND PLAYER SEQUENCE

ENTRY OF EDIT POINTS

Follow the procedure below to enter edit-in and edit-out points. Five of the 6 edit points (edit-in and edit-out points for each of players A and B and the recorder) must be entered. Edit points can be entered while in the Play mode or in the Search mode.

Entering Player's Edit Points

- ① Select player A or B with the A or B button.
- ② Locate the edit-in point, and engage the Still mode.
- ③ Press the ENTRY button while pressing the player's IN button. The IN indicator in the time counter lights and the OUT indicator blinks.
- ④ Locate the edit-out point, and engage the Still mode.
- ⑤ Press the ENTRY button while pressing the player's OUT button. The OUT indicator in the time counter lights.

Repeat the same for the other player.

Entering Recorder's Edit Points

⑤ Locate the edit-in point, and engage the Still mode.
 ⑥ Press the ENTRY button while pressing the recorder's IN button. The IN Indicator in the time counter lights and the OUT Indicator blinks.

NOTE:

In 9-pin linecode-referenced editing, if the colour frames at the recorders and the first roll player's edit-in points do not match, the last dot on that player's counter display lights. To find out how many frames must be shifted for the colour frames to match, press the player IN button. The other player's display shows the colour frame shift in frames while the IN button is being pressed. Correct either the player's or recorder's edit-in point so that the indicated number of frames is "00". For correcting edit points, see page 31.

⑦ Locate the edit-out point, and engage the Still mode.
 ⑧ Press the ENTRY button while pressing the recorder's OUT button. The OUT Indicator in the time counter lights.

* If the three edit-in points for the players and recorder, and the two edit-out points for the players have already been entered, step 9 need not be performed.

Simultaneous Entry of Edit Points for Players and Recorder

A single operation lets you enter the edit points for all three VTRs.

⑨ To enter the edit-in points for both players and recorder at the same time, press the Minus (-) and ENTRY buttons simultaneously. The IN Indicators in the time counters will light.
 ⑩ To enter the edit-out points for both players and recorder, press the Plus (+) and ENTRY buttons simultaneously. The OUT Indicators in the time counters will light. If the edit-in points for players A and B and the recorder have already been entered, the edit-out point for the recorder will not be entered.

Confirmation of Edit Points and Duration

<Confirming edit-in points>

- To confirm the counter data of the edit-in point, press the IN button for the player or the recorder as necessary. The corresponding IN Indicator will blink and the data will be displayed for as long as the IN button is pressed.
 - The edit-in points for both players and the recorder can be confirmed at the same time by pressing the Minus (-) button.

<Confirming the duration of edits>

- To confirm the duration of an edit, press the IN and OUT buttons simultaneously. The IN and OUT Indicators blink and the duration of the edit is indicated.
 - To confirm the durations of the edits for both players and the recorder, press the Minus (-) and Plus (+) buttons simultaneously.

Access to Edit Points

<Accessing edit-in points>

- The edit-in point can be accessed by pressing the IN button while pressing the GOTO button.
 - The edit-in points for both players and recorder can be accessed at the same time by pressing the Minus (-) and GOTO buttons simultaneously.

<Accessing edit-out points>

- The edit-out point can be accessed by pressing the OUT button while pressing the GOTO button.
 - The edit-out points for both players and recorder can be accessed at the same time by pressing the Plus (+) and GOTO buttons simultaneously.
 - If an edit-out point is specified at a point before the edit-in point, the edit-in point is automatically cancelled. If an edit-in point is specified at a point after the edit-out point, the edit-out point is automatically cancelled.
 - Using the time counter memory, counter data can be temporarily held in memory and then entered as an edit-in or edit-out point. See page 37, "TIME COUNTER MEMORY FUNCTION".

PREVIEW EDITING

① Set player A, player B, and recorder to the Still mode.
 ② Press the PREVIEW button. Player A, player B, and the recorder start to run as they would in actual editing. The picture can be monitored on the monitor connected to the recorder. (The video and audio signals of the edit are monitored in the E-E mode.)

To Quit Preview

③ To quit during preview editing, press the ALL STOP button. All three VTRs enter the Still mode.

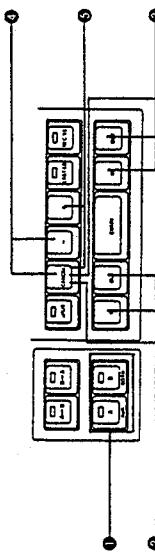

④ When the PREVIEW button is pressed during preview editing, preview editing restarts from the beginning.

CANCELLATION AND CORRECTION OF EDIT POINTS

Cancelling Edit Points

① Entering a new edit point automatically cancels the previous edit point. To cancel an edit point without entering a new one, proceed as follows:

<Cancelling player's edit points>

- ② Select the player with the A or B button.
- ③ To cancel an edit-in or edit-out point, press the IN or OUT button and the CANCEL button simultaneously. The IN or OUT Indicator will go out.

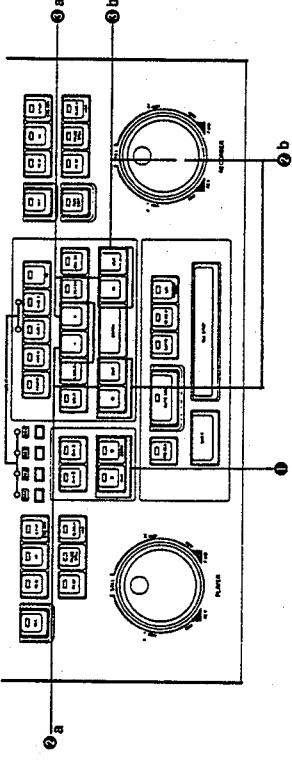

<Cancelling recorder's edit points>

- ④ To cancel an edit-in or edit-out point, press the IN or OUT button and the CANCEL button simultaneously.
- ⑤ When the counter is in the TC mode, pressing the IN or OUT button cancels the edit points.
 - In both modes, the RESET button is pressed while the lap time is displayed, the lap time is reset.

<Simultaneous cancellation of edit-out points>

- ⑥ The edit-out points for both players and recorder are cancelled simultaneously when the Plus (+) and CANCEL buttons are pressed simultaneously. The OUT indicators will go out.
 - When the counter is in the CTL mode, pressing the RESET button not only resets the counter, but cancels the edit points.
 - When the counter is in the TC mode, pressing the RESET button cancels the edit points.
 - In both modes, the RESET button is pressed while the lap time is displayed, the lap time is reset.

Correction of Edit Points

<Correcting player's edit points>

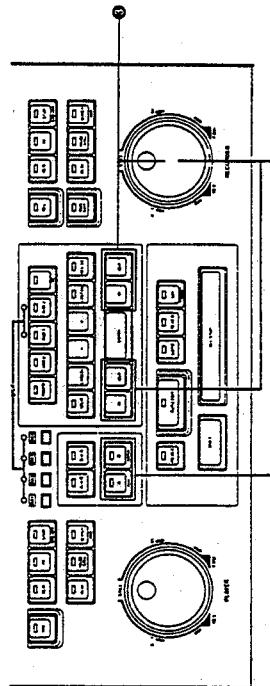

- ① Select the player with the A or B button.
- ② To shift edit points frame by frame, press the Minus (-) or Plus (+) button with the IN or OUT button depressed.
- ③ This can also be done by turning the JOG dial on the recorder control section while pressing the IN or OUT button.

<Colour frame corrections>

- When the A → B mode is selected, colour frame shift between player A and recorder can be corrected. When player B → A mode is selected, colour frame shift between player B and recorder can be corrected.
- ① Press the player IN button.
 - If the fast dot on the first roll player's counter display lights, the player's and recorder's colour frames do not match.
 - The colour frame shift is indicated in frames on the other player's display while the IN button is being pressed.

Correcting the Duration of Edits

This technique is convenient when the time of an edit is limited, especially in insert editing. The duration is modified by changing the edit-out point.

<Correcting player's edit duration>

- ① Select the player with the A or B button.
- ② Turn the JOG dial while pressing both the IN and OUT buttons.

EXECUTION OF AN EDIT

- ① Set player A, player B, and recorder to the Still mode.
- ② Press the AUTO EDIT button.
Actual editing is started by the same procedure as preview editing. Editing stops automatically at the edit-out point. When editing is finished, the recorder plays back for the postroll time (1 sec), then rewinds automatically to the edit-out point and enters the Still mode. Editing will restart if the AUTO EDIT button is pressed while editing is in progress.

<Correcting recorder's edit points>

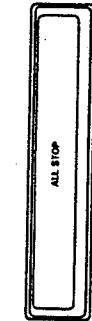

- ① Shift the player's or recorder's edit-in point so that the indicated number of frames is "00".
- ② Check the picture at the corrected edit-in point. If it is not suitable as the start of a new edit, search for another tape position and check colour frame matching.

<Correcting recorder's edit points>

- ① To shift edit points frame by frame, press the Minus (-) or Plus (+) button with the IN or OUT button depressed.
- ② This can also be done by turning the JOG dial while pressing the IN or OUT button.

To stop editing before the entered edit-out point is reached:

- ① Press the ALL STOP button.
All three VTRs enter the Still mode.

This procedure can be omitted if unnecessary:

- ① Press the REVIEW button.

The recorder rewinds the tape past the edit-in point, then starts playback. After it has passed the edit-out point, it enters the Still mode.

- The Review mode is released automatically 5 seconds after the edit-out point.

REVIEW

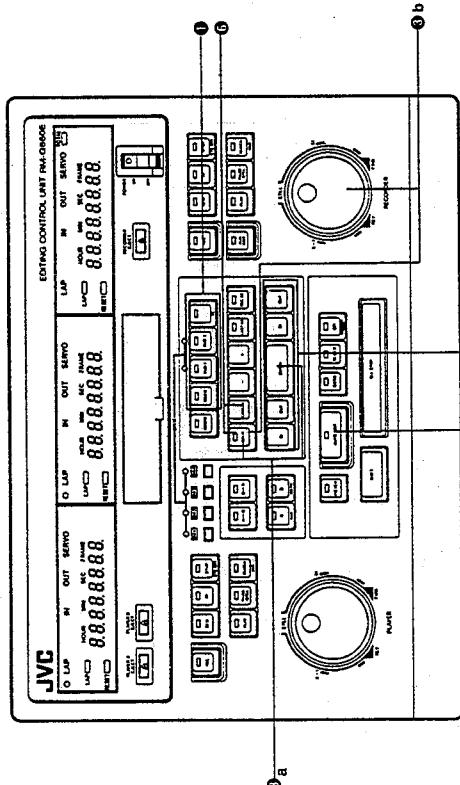

To release the Review mode before the edit-out point:

- ① Press the ALL STOP button. The recorder enters the Still mode.

AUDIO SPLIT EDITING

Audio split editing is a type of insert editing in which the edit-in point for the audio signal is entered independently of that for the video signal. Edit-in points for the AUD-1 and AUD-2 signals cannot be entered independently.

- ① Press the INSERT buttons [VIDEO, AUD-1, AUD-2, TC] corresponding to the signals to be inserted. To insert line code signals, press the SHIFT and TC buttons simultaneously.
- ② Enter the edit-in points for both the player and the recorder. These edit-in points serve as the video edit-in points.
- ③a (While monitoring the sound and picture) Determining the audio edit-in point for the recorder, and engage the Still mode. Press the SPLIT and ENTRY buttons simultaneously.
- ③b (For setting in line) Turn the JOG dial while pressing the SPLIT button; clockwise to set the audio edit-in point ahead of the video edit-in point, and counterclockwise to delay the audio edit-in point with respect to the video edit-in point.
- ④ To cancel the Split Edit mode, press the SPLIT and CANCEL buttons simultaneously.

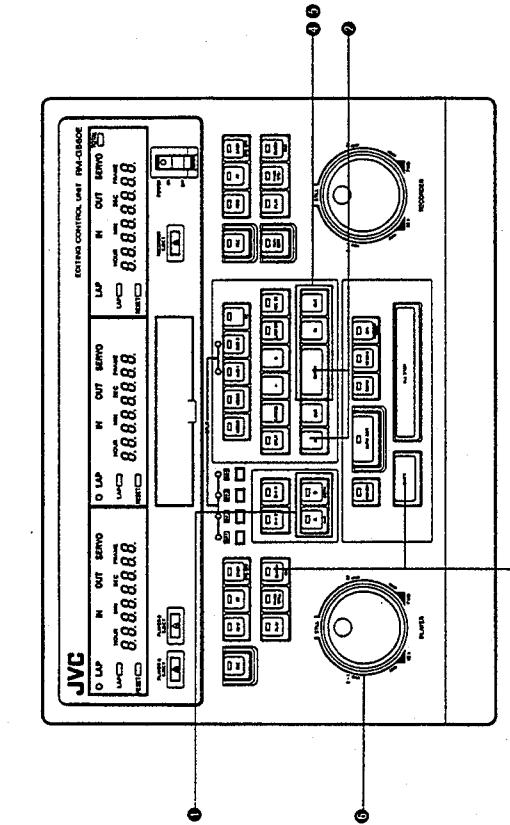

Counter Display

Left time counter (for player A)	Middle time counter (for player B)	Right time counter (for recorder)
Advanced	Advanced	-2.12
Delayed	Delayed	2.12

When the edit-in point for the audio signal is entered, the corresponding SPLIT indicator lights.

AT (AUTO TRACKING) EDITING

Still pictures and variable speed playback pictures can be used as source material in editing, when a VTR with an AT function is used as the player (connected via a 9-pin connector).

- ① Press the A or B button to select the VTR equipped for AT playback.
- ② Enter the edit-in point for the selected player.
- ③ Press the SHIFT and SEARCH buttons simultaneously to engage the variable speed playback mode.
- ④ Enter the edit-in point for the recorder.
- ⑤ Enter the edit-out point for the recorder.
- ⑥ Turn the player SEARCH dial to select the desired speed.
- ⑦ The Still mode can be selected if required. See page 20, "AT (Auto Tracking) Playback".
- ⑧ Follow the normal editing procedure.

<To confirm the speed of AT playback>
Press the SHIFT and SEARCH buttons simultaneously. The selected speed is indicated in percentage on the other player's time counter.

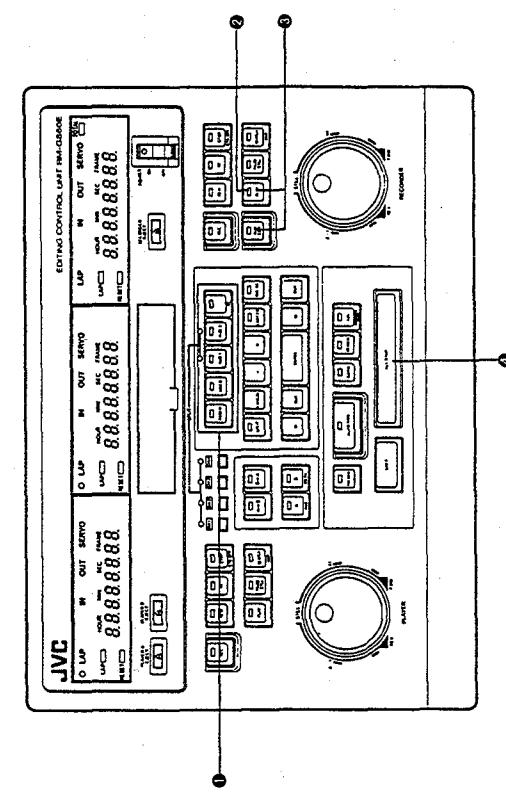

<To cancel AT playback>
Press the FF, REV, STOP, ALL STOP, or A or B select button.

• The Split Edit mode is entered even when one SPLIT Indicator is lit.

• Audio split editing cannot be applied in AT editing.

RUN EDITING

Connect a video camera or a VTR to the recorder, and supply audio and video signals. Editing is started while the recorder is in the Play mode.

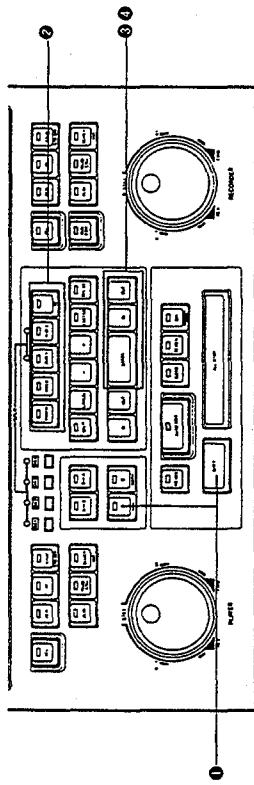

- ① Select the required edit mode.
- ② Press the PLAY button for the recorder to start playback.
- ③ Press the RUN EDIT and PLAY buttons simultaneously at the desired edit-in point. The recorder will start recording.

- ④ Press the ALL STOP button at the edit-out point.
The recorder will enter the Still mode.

- ⑤ Press the RUN EDIT button while the TC button is being pressed.

INDEPENDENT EDITING

Connect a video camera or a VTR to the recorder, and supply audio and video signals. Without using player A or B, automatic editing is possible by entering the edit-in and edit-out points for the recorder.

- ① Press the SHIFT and A buttons simultaneously to engage the AUX mode.
- ② Select the type of editing.

- ③ Enter the edit-in point for the recorder.
- ④ Enter the edit-out point for the recorder.
- ⑤ Follow the normal editing procedure.

TIMECODE-REFERENCED EDITING

The RM-G860U incorporates a time code reader to allow editing in reference to time codes. Reading of time codes is possible only with equipment controlled via the 9-pin remote control terminal.

SETTING TO THE TIME CODE MODE

Set the TC/CTL switch, located on the system setting panel, to "TC".

TO READ USER BITS

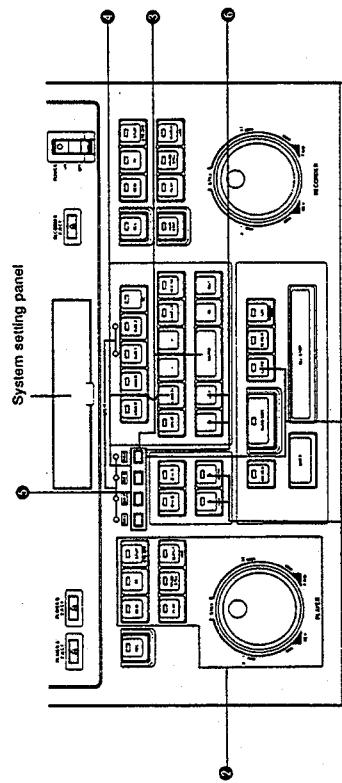

The user bits are displayed on the time counter while the TC button is being pressed.

TIME COUNTER MEMORY FUNCTION

When determining edit points for the players, data for up to 4 counter recordings can be temporarily stored in memory as possible edit points. Later they can be entered as determined edit points or located using the Go-To function.

Preparation
Set DIP switch SW2-1 (located on the system setting panel) to "OFF". (The preset position of this switch is OFF.)

Storing Counter Data

- ① Select the player with the A or B button.
- ② Control the player with the buttons on the player control section and engage the Still mode at the position to be stored in memory.

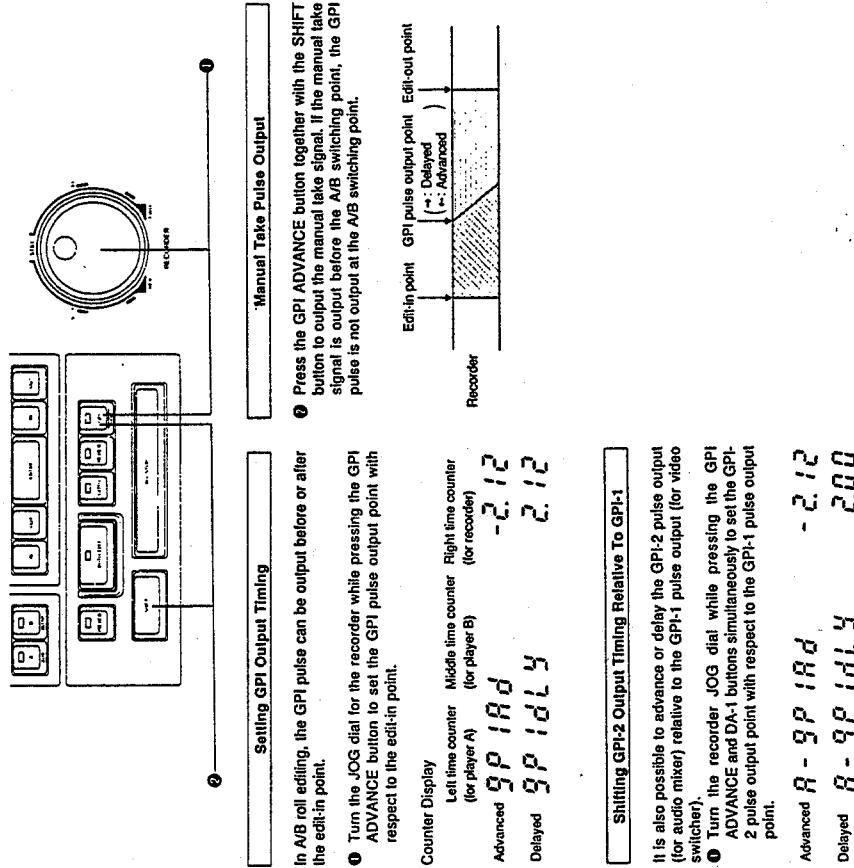

③ Press one of the DA buttons and the ENTRY button simultaneously. The DA button lights and the time counter data has been stored in memory.

- Store other counter data in the same way by pressing an unused DA button and the ENTRY button.
- DA buttons which are lit are already occupied.
- If new data is stored, the existing data is cancelled.

Cancelling Counter Data

- ① Press the DA button corresponding to the data you wish to cancel and the CANCEL button simultaneously. The button will go out and the memory will be empty.

GPI PULSE OUTPUT TIMING AND MANUAL TAKE

Access to Tape Position Corresponding to Stored Data

- ① Press the DA button corresponding to the counter data you wish to access together with the GOTO button. The player will search for the point and engage the Still mode.

REC EE FUNCTION

Input signals supplied to the recorder can be monitored on a monitor connected to the recorder. The REC EE function is convenient when using a single monitor in editing.

Press the REC EE button. The button's indicator will light and the monitor connected to the recorder will display the input signal from the player.

To cancel the REC EE mode, press the REC EE button again. Pressing the AUTO EDIT or PREVIEW button cancels the REC EE mode automatically and engages the selected mode.

With DIP switch SW1-3 (located on the system setting panel) set to "ON", the REC EE mode is automatically entered when the player is operated, and automatically cancelled when the recorder is operated. This function is especially useful in single-monitor editing.

NOTE:
When the REC EE button is ON, the time counter may be unstable and continue counting when the player or recorder enters the Still mode in VITC-referenced editing using the BR-S611E/B11E with the SA-F511E Interface Unit (optional). This has no effect on actual editing.

With DIP switch SW1-3 (located on the system setting panel) set to "ON", the REC EE mode is automatically entered when the player is operated, and automatically cancelled when the recorder is operated. This function is especially useful in single-monitor editing.

NOTE:
When the REC EE button is ON, the time counter may be unstable and continue counting when the player or recorder enters the Still mode in VITC-referenced editing using the BR-S611E/B11E with the SA-F511E Interface Unit (optional). This has no effect on actual editing.

SIMULTANEOUS CONTROL OF TWO PLAYERS

Players A and B can be operated simultaneously. Use this function to locate edit points in A/B roll editing.

Press the B button together with the SHIFT button. Both the A and B buttons light and both player indicators in the time counters will light. (BOTH mode)

INFORMATION ON THE COUNTER DISPLAY

ERROR MESSAGES

Display	Status
Loc dL	This display warns that the corresponding VTR's REMOTE/LOCAL select switch is set to LOCAL. Appears when any of the tape control buttons is pressed. (Not displayed with some VTRs.)
No TPE	Available only with 9-pin VTRs. This display warns that no tape is loaded. Appears when any of the tape control buttons is pressed. (Not displayed with some VTRs.)
No SEL E7	This display shows that the corresponding player cannot be operated since the recorder is in the AUX mode.

With DIP switch SW1-3 (located on the system setting panel) set to "ON", the REC EE mode is automatically entered when the player is operated, and automatically cancelled when the recorder is operated. This function is especially useful in single-monitor editing.

NOTE:
When the REC EE button is ON, the time counter may be unstable and continue counting when the player or recorder enters the Still mode in VITC-referenced editing using the BR-S611E/B11E with the SA-F511E Interface Unit (optional). This has no effect on actual editing.

(1) Colour frame matching indication	0000000000	With this dot : Colour frames do not match. Without this dot : Colour frames match.
(2) Colour frame lock error indication (In 9-pin editing only)	E r . F .	This display appears on the corresponding counter display if the recorder fails to lock to the colour frames of the reference video signal when editing or preview editing is started.
(3) Colour frame shift indication	.0 .1	One frame is shifted in reverse. Colour frames match.
(4) Audio edit-in point in split editing	Rd Advanced dL Delayed	One frame is shifted forward. Two frames are shifted forward. Colour frames match. One frame is shifted.
(5) GPI pulse output point	9P1Rd Advanced 9P1dL Delayed	Middle time counter (for player A) - 2.12 Middle time counter (for player B) 2.12 Right time counter (for recorder) - 2.12
(6) GPI-2 pulse output point	R Advanced R - 9P1Rd Delayed	Middle time counter (for player A) 2.12 Middle time counter (for player B) 2.12 Right time counter (for recorder) 2.00

SECTION 1

GENERAL DESCRIPTION AND DISASSEMBLY

1.1 REMOVAL OF EXTERNAL COVERS

Remove 5 screws ① and disconnect connector from the MAIN CPU board to separate the top cover and main chassis.

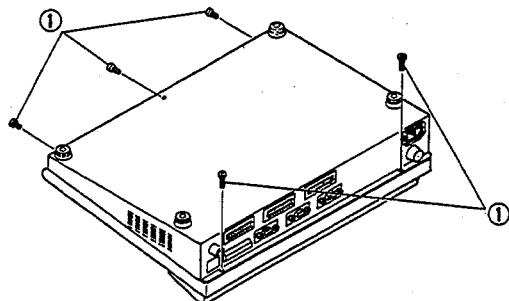

Fig. 1-1

1.2 REMOVAL OF MAIN BOARDS

1. CONNECTOR BOARD

Remove 4 screws ② and disconnect connector from the MAIN CPU board.

2. MAIN CPU BOARD

Take off the CONNECTOR board. Next, remove 10 screws ③ and disconnect connector from the switching regulator.

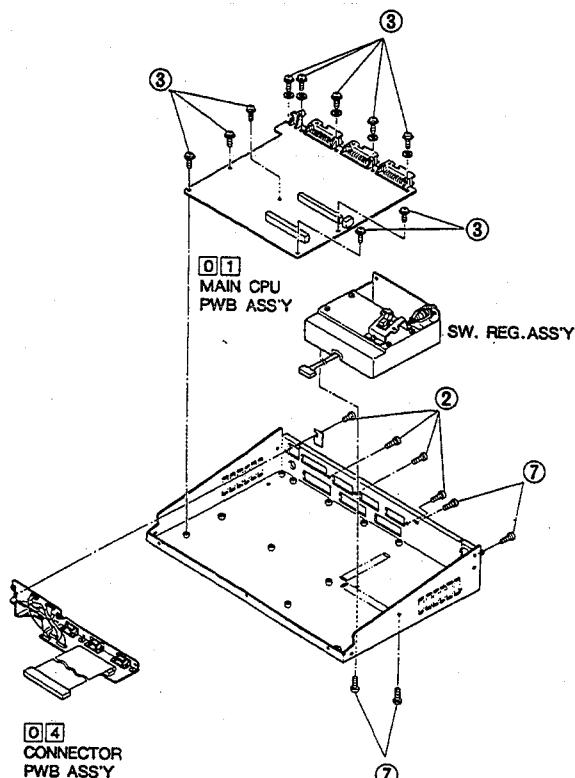

Fig. 1-2

3. OPERATION BOARD

Remove 12 screws ④ and disconnect connector from the SEARCH/JOG CONTROL board.

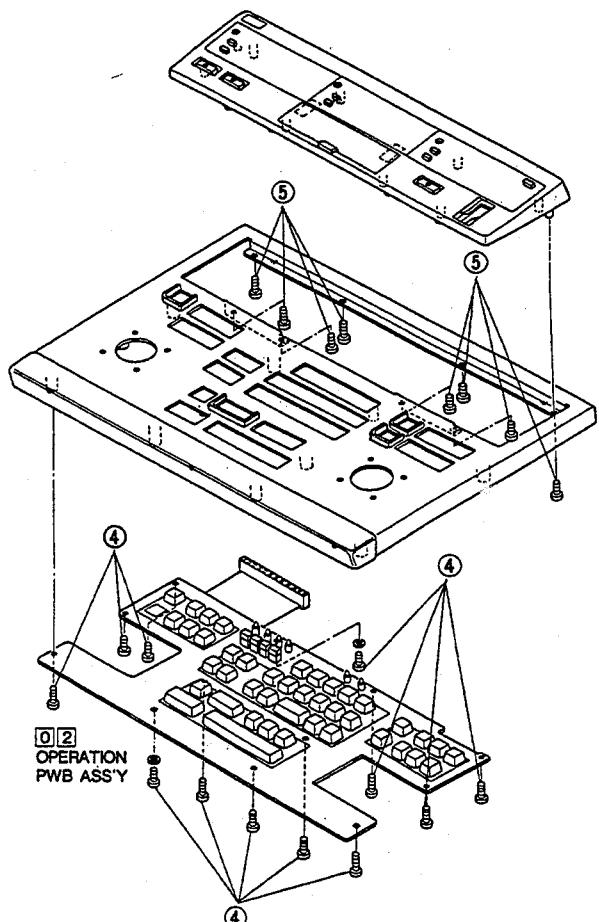

Fig. 1-3

4. DISPLAY BOARD

Remove 8 screws ⑤ from the panel and take off the DISPLAY assembly. Remove 8 screws ⑥ and take off the DISPLAY board from the DISPLAY assembly.

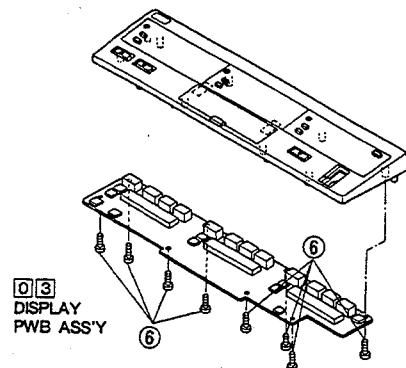

Fig. 1-4

1.3 REMOVAL OF SWITCHING REGULATOR ASSEMBLY

Remove 4 screws ⑦. Refer to Fig. 1-2.

1.4 REMOVAL OF SEARCH/JOG CONTROL ASSEMBLY

1. Position the search/jog knob as indicated in Fig. 1-5.
2. Remove the outer rubber ring (tire) ①.
3. Insert a metric hex wrench (1.5 mm) into hole A and loosen the setscrew ②. Remove the jog knob ③.
4. Remove 3 screws ④ and remove the search knob ⑤.
5. Remove 4 screws ⑥ and remove the SEARCH/JOG CONTROL assembly.

Note:

Do not remove the JOG board from the SEARCH/JOG CONTROL assembly. Since adjustment requires a special fixture, the board is not replaced separately.

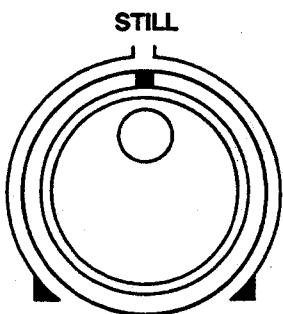

Fig. 1-5 Search/jog knobs position

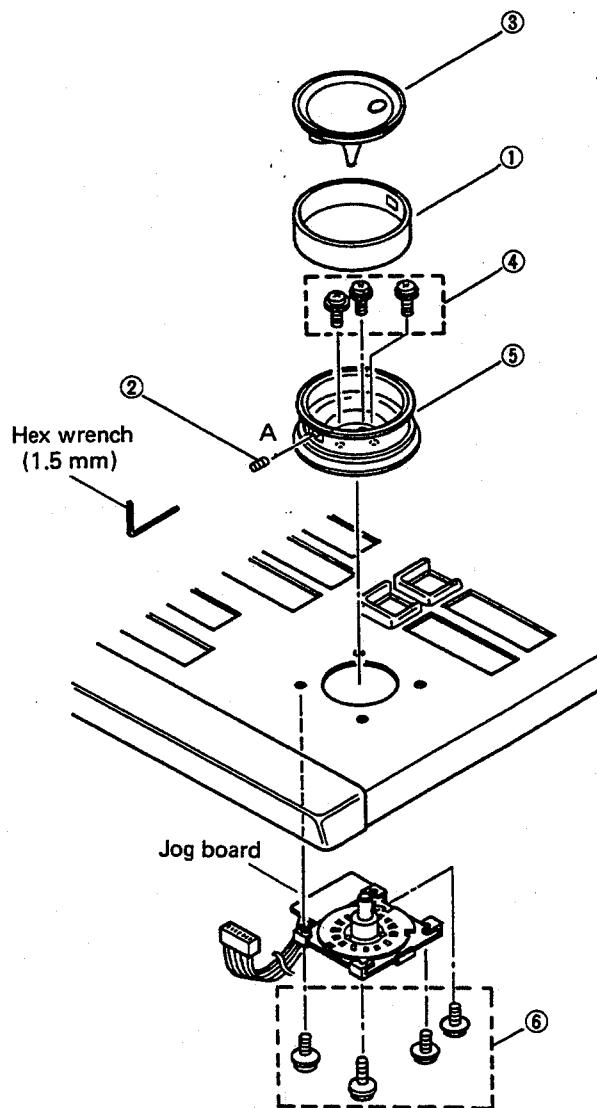

Fig. 1-6 Search/jog knobs and control assembly

1.5 COMBINATION FOR SYSTEMATIZATION

1.5.1 Note of combination

The RM-G860E is an A/B roll editing controller especially designed to combine with JVC VTRs. Connectable JVC VTRs are as follows.

Connectable VTRs	
Player	S-VHS: BR-S610E/611E/810E/811E MII: KR-M800E/820E/840E/545E/540E VCR: PR-900E/600E
Recorder	S-VHS: BR-S810E/811E MII: KR-M800E/820E/840E VCR: PR-900E

Note:

- 1) Connection with other VTRs (made by SONY in particular) with the 9-pin connectors may cause malfunction of the system since those models and versions of Betacam, 3/4" format VTR, etc. are different in the protocol.
- 2) If it is requested to develop a special ROM proper to the specifications of another VTR, it is charged a fee.
- 3) In the event that the ROM does not deal with connected other made VTRs, consult the manufacturer.

1.5.2 Time code editing with the 11/10 series VTRs

For time code editing with BR-S610E/S611E/S810E/S811E VTRs, the interface unit SA-F911E is required.

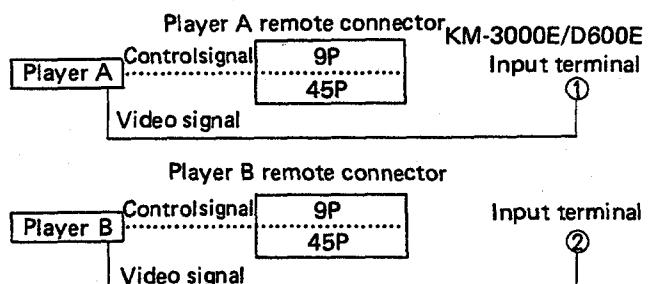

CONNECTION

1.5.3 Connection with KM-3000E/KM-D600E

Number of video players connectable with the RM-G860E is four units (two with 9-pin connectors and other two with 45-pin connectors) at maximum. However, when the KM-3000E/KM-D600E is connected in the system, connectable players are limited to 2 units. When three or more VTRs connected with the player terminals of the RM-G860E are used, change the connections since the GPI selector is incapable of dealing with.

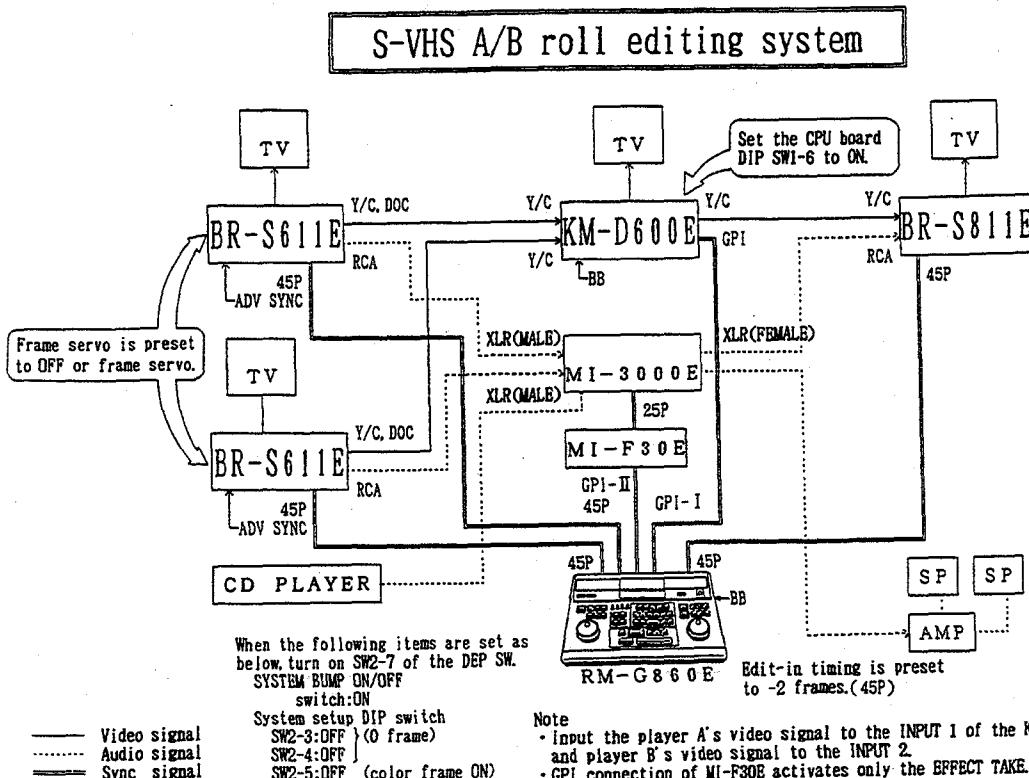

In practice, connect the player A's control and video output signals to the "player A remote connector (9-pin or 45-pin)" of the RM-G860E and the "input 1" of the KM-3000E/D600E, while connect the player B's control and video output signals to the "player B remote connector (9-pin or 45-pin)" of the RM-G860E and the "input 2" of the KM-3000E/D600E.

RM-G860E

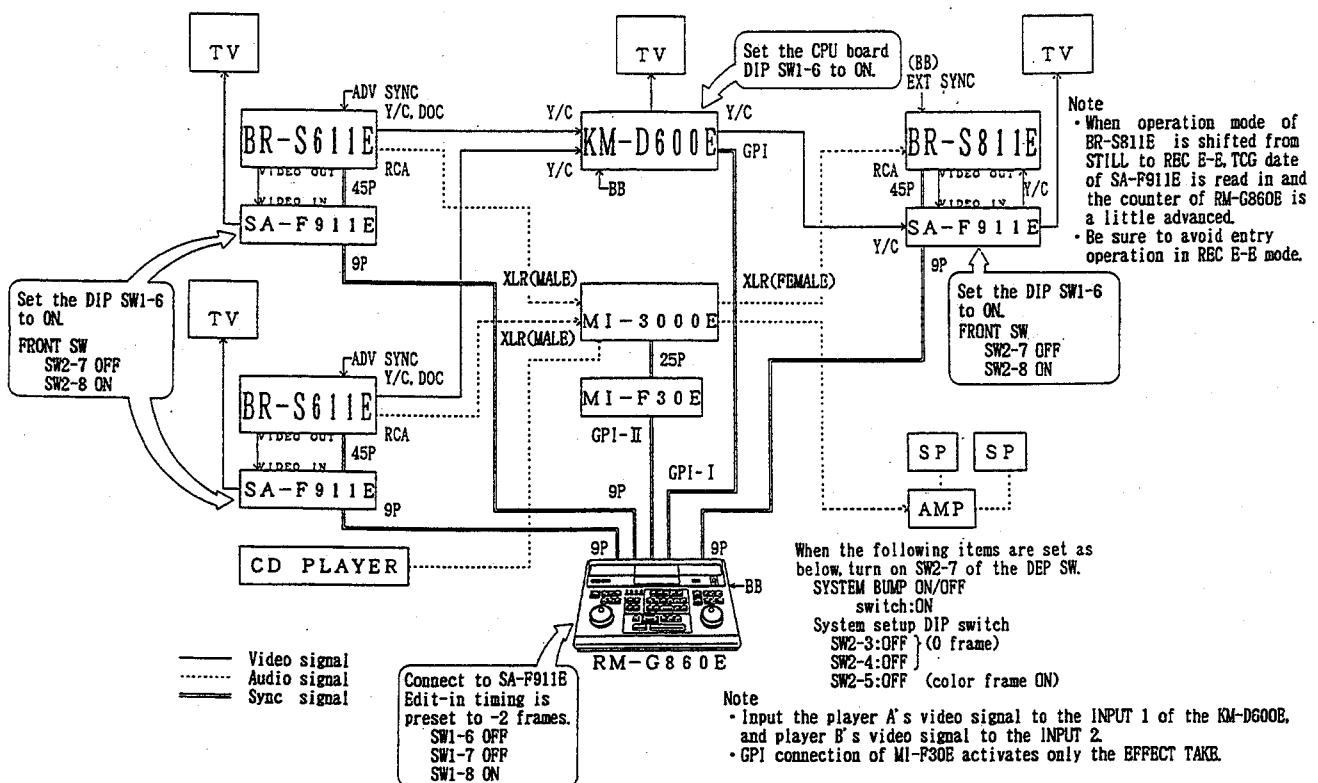

Note:

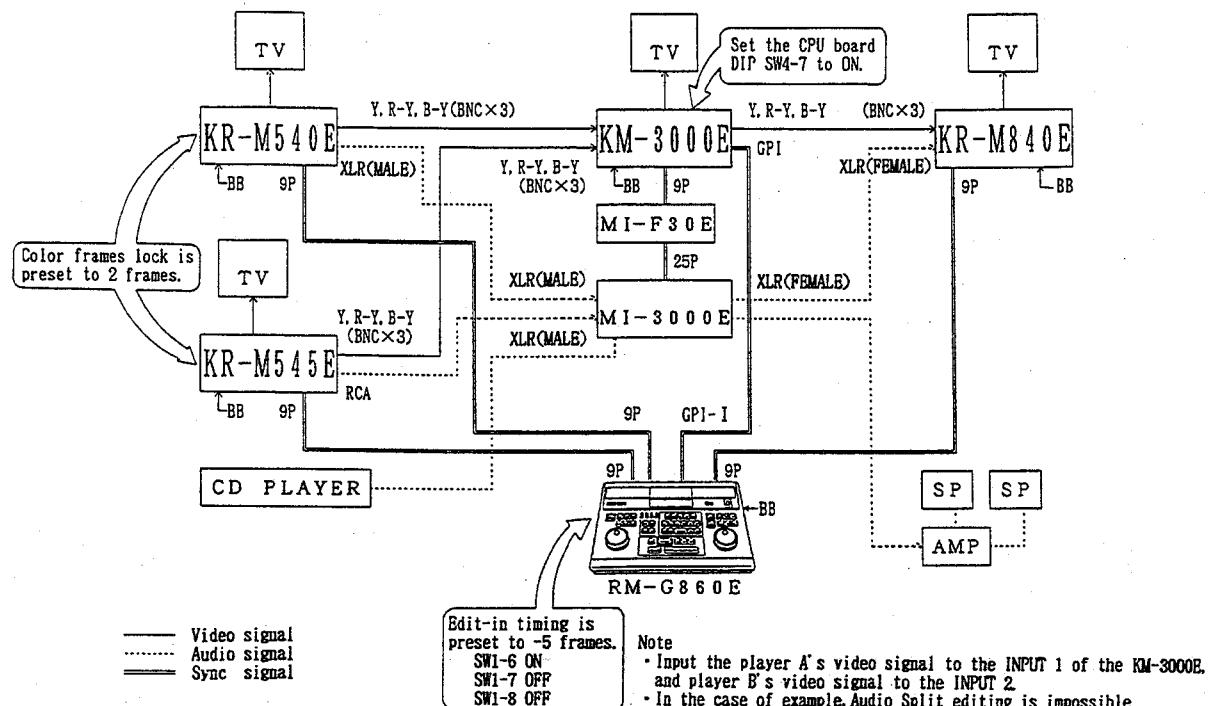

The key [A] of RM-G860E and the bus "1" of KM-3000E/D600E and the key [B] and the bus "2" are respectively interlocked with GPI signal.

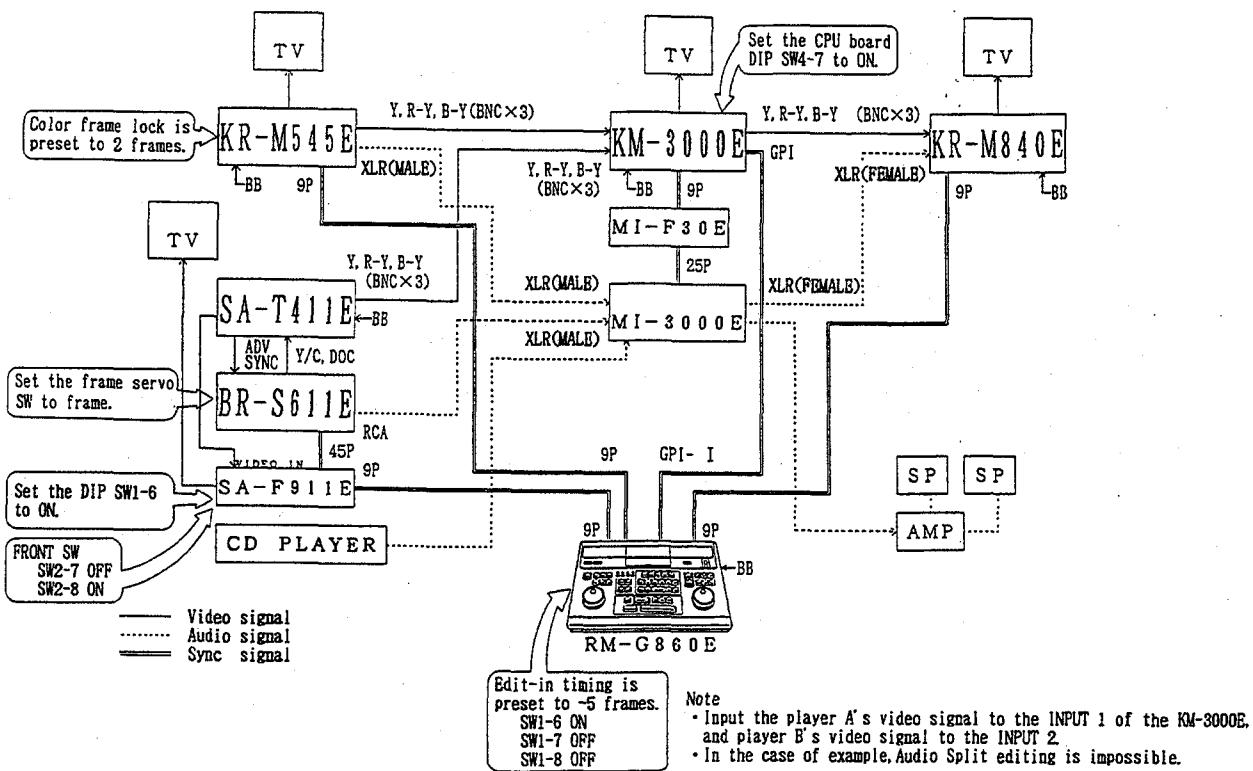

Timecode editing with S-VHS A/B roll editing system

1.7 HOW TO CHECK THE P-ROM (IC49) VERSION AND LED DISPLAY

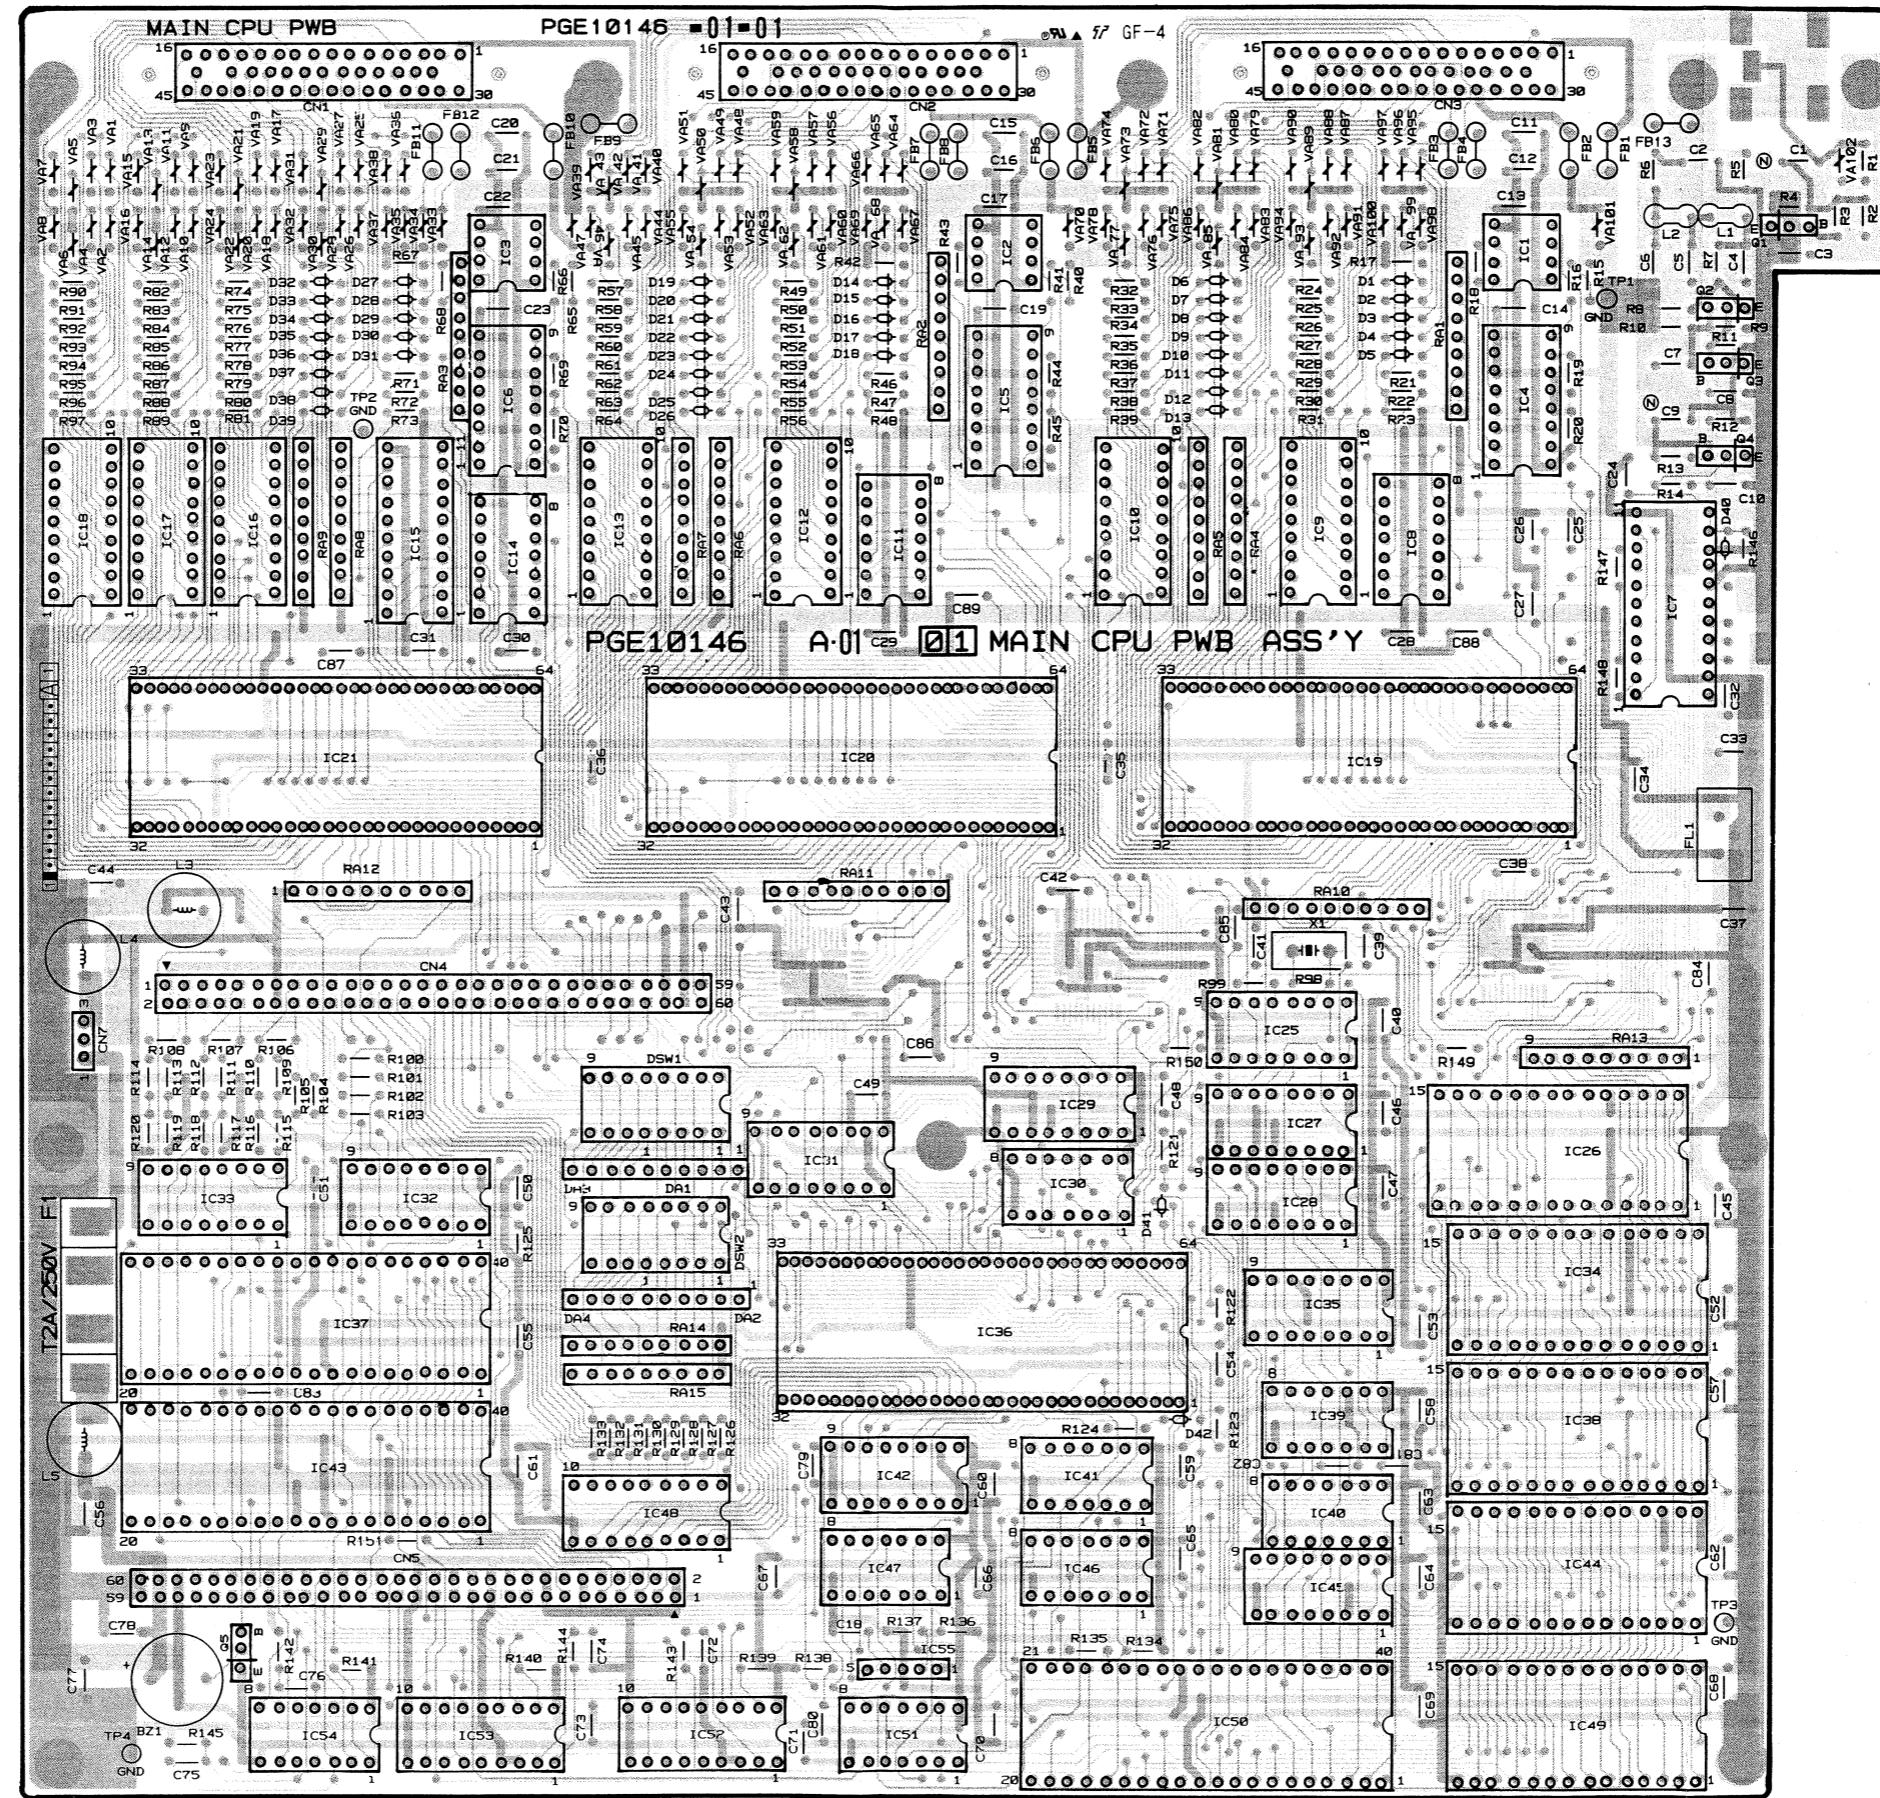

1. Chang the Dip-switch of 1-4 to ON. The switch is located under the panel.
2. Press **TOTAL** located top right and **SEARCH** buttons of recorder side, then the display of A-player shows 0 0 . 0 3 . 0 0 . 0 1 that means version 03-01.
To clear the indication press **SHIFT** and **ALL STOP**.
3. To check display indication, press three of **SHIFT** + **ALL STOP** + **TOTAL** buttons simultaneously, all LEDs start counting.
By pressing **ALL STOP**, it's cleared.
4. After the check, back to the Dip-SW 1-4 to OFF otherwise no functioning.

SECTION 3

EXPLODED VIEWS AND PARTS LIST

SAFETY PRECAUTION

Parts identified by the  symbol are critical for safety. Replace only with specified part numbers.

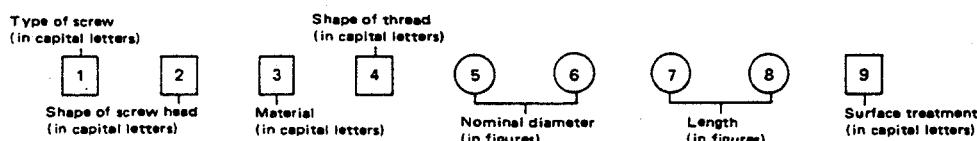

NOTE:

- [M] indicates mechanical symbol number.
- "X" indicates quantity per set.

3.1 STANDARD PART NUMBER CODING

3.1.1 Screw coding

Standard screw part numbers are as follows.

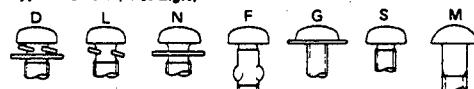

Type of screw (first digit)

- S Normal screws
- D Assembled machine screws (with plain and spring washers)
- L " (with spring washer)
- N " (with plain washer)
- F Feather screws
- G Washer head tapping screws
- M Wood screws

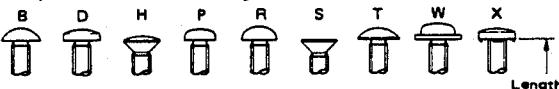

Shape of screw head (second digit)

- B Brazier head
- D Binding head
- H Oval countersunk head
- P Pan head
- R Round head
- S Flat head
- T Truss head
- W Washer head (machine screws)
- X Toothed head

-Type of screw (first digit) -

- Shape of screw head (second digit) -

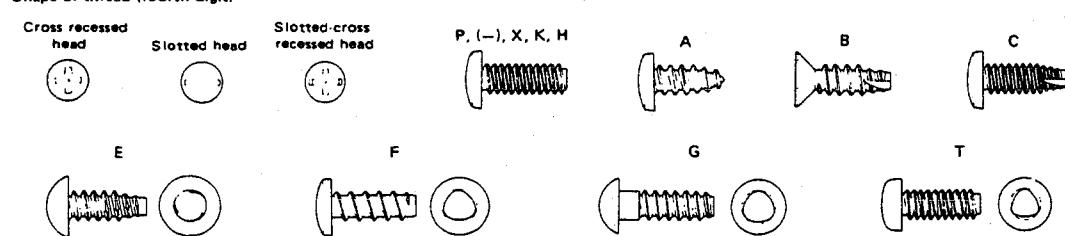

Material (third digit)

- S Steel
- E Stainless steel
- C Cast iron
- U Copper
- B Brass
- P Phosphor bronze
- N Nickel silver
- Y Cast brass
- A Aluminum
- Z Zinc alloy
- K Polycarbonate

Shape of thread (fourth digit)

- P Cross recessed head screws
- (-) Slotted head machine screws
- X Slotted-cross recessed head machine screws
- K Cross recessed head machine screws for precision equipment (type 1)
- H " (type 3)
- A Cross recessed head tapping screws (type 1)
- B " (type 2)
- C " (type 3)
- E Cross recessed head special tapping screws (brand : evertight)
- F " (brand : P-tight)
- T " (brand : taptight)
- G "

- Shape of thread (fourth digit) -

Nominal diameter (fifth and sixth digits)

The fifth and sixth digits are numbers indicating a nominal diameter or dimension. If the dimension exceeds 10 mm, three digits are used. The number indicates a nominal diameter or dimension, given in millimeters, multiplied by ten.

Surface treatment (ninth digit)

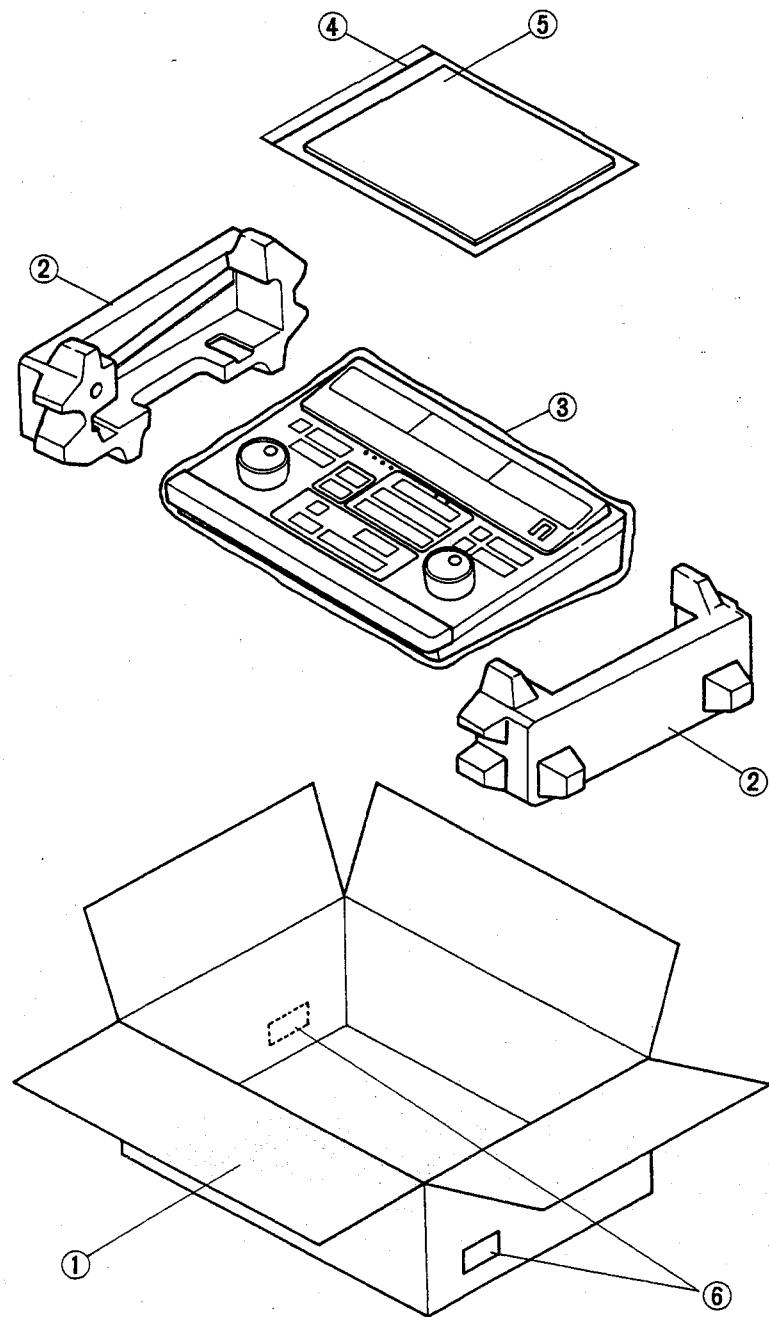

- Z Dichromate treatment after galvanizing (MFZn II-C)
- N Nickel plating (MFNi II, MFNi I)
- R Chromium plating (MBCr II, MBCr I)
- G Silver plating (SP4)
- B Black coating after plating
- F Blackening of iron (FB)
- M Blackening after galvanizing
- K Pickling of brass (PF2)
- P Phosphate treatment
- W Uni-chrome plating
- L Coating with transparent paint
- A Coloring red after galvanizing (MFZn II-C)
- C Coloring blue after galvanizing (MFZn II-C)
- T Coloring green after galvanizing (MFZn II-C)
- V Coloring purple after galvanizing (MFZn II-C)

Length (seventh and eighth digits)

The seventh and eighth digits are numbers indicating length in millimeters. The preceding figure is zero when the dimension is smaller than 10 mm. For machine screws used in precision equipment whose length is given in units of 0.1 mm, the number indicates ten times the size of their length.

SECTION 4

ELECTRICAL PARTS LIST

SAFETY PRECAUTION

Parts identified by the  symbol are critical for safety. Replace only with specified part numbers.

ABBREVIATIONS IN THIS LIST ARE AS FOLLOWS :

RESISTORS—All resistance values are in ohms (Ω), unless

otherwise indicated.

k	: 1,000 (Kilo)
M	: 1,000,000 (Mega)
Chip R	: Chip Resistor
Chip VR	: Chip Variable Resistor
Comp. R	: Composition Resistor
CR	: Carbon Film Resistor
FR	: Fusible Resistor
MFR	: Metal Film Resistor
MPR	: Metal Plate Resistor
OMR	: Oxide Metal Film Resistor
PMR	: Precision Metal Film Resistor
UFR	: Unflammable Resistor
VR	: Variable Resistor (Potentiometer)
WR	: Wire Wound Resistor

CAPACITORS—All capacitance values are in μF , unless

otherwise indicated.

pF	: $\mu\mu\text{F}$ (Pico farad)
C Cap	: Ceramic Capacitor
Chip Cap	: Chip Capacitor
Chip T Cap	: Chip Tantalum Capacitor
E Cap	: Electrolytic Capacitor
FM Cap	: Film Mica Capacitor
LL Cap	: Low Leak Current Electrolytic Capacitor
MM Cap	: Metalized Mylar Capacitor
MP Cap	: Metalized Paper Capacitor
MY Cap	: Mylar Capacitor
NP Cap	: Non-polar Capacitor
PC Cap	: Polycarbonate Capacitor
PP Cap	: Polypropylene Capacitor
PS Cap	: Polystyrol Capacitor
T Cap	: Tantalum Capacitor
TF Cap	: Thin Film Capacitor
TR Cap	: Trimmer Capacitor

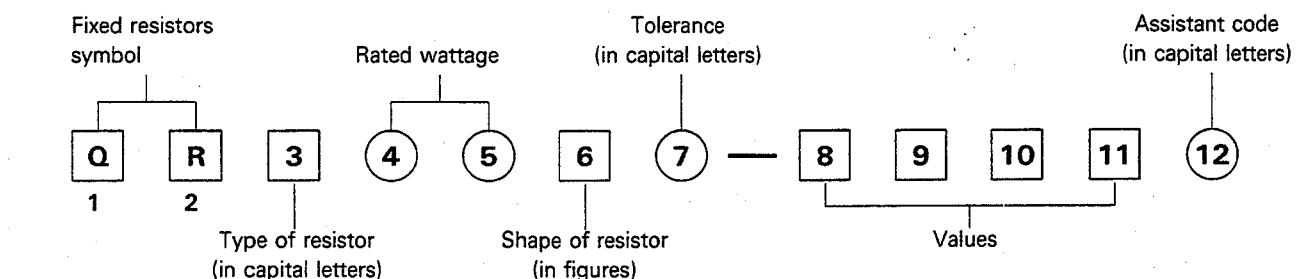

NOTES :

- [2 digits] indicates circuit board symbol number.
- "X" indicates quantity per set.

4.1 STANDARD PARTS NUMBER CODING

4.1.1 Fixed resistor coding

Fixed resistor part numbers are as follows.

Type of resistor(third digit)

C	Composition resistors
D	Carbon film resistors
F	Unflammable resistors
G	Oxide metal film resistors
H	Fusible resistors
M	Metal plate resistors
S	Metal glazed resistors
V	Precision metal film resistors
W	Wire wound resistors
X	Metal film resistors
Z	Special resistors

Rated wattage (fourth and fifth digits)

A0	1/10 W
18	1/8 W
16	1/6 W
14	1/4 W
12	1/2 W
01	1 W
02	2 W
03	3 W
04	4 W
05	5 W
06	6 W
07	7 W
75	7.5 W
08	8 W
10	10 W
15	15 W
A6	16 W
20	20 W
30	30 W

Tolerance (seventh digit)

F	$\pm 1\%$
G	$\pm 2\%$
J	$\pm 5\%$
K	$\pm 10\%$
M	$\pm 20\%$

Assistant code (twelfth digit)

A	Small type
B	Small type
S	Small type
Y	Lead taping
Z	Lead taping

Values

(eighth – tenth or eleventh digits)

examples:

R47	0.47 Ω
4R7	4.7 Ω
470	47×10^0	47 Ω
471	47×10^1	470 Ω
472	47×10^2	4.7 k Ω
473	47×10^3	47 k Ω
474	47×10^4	470 k Ω
475	47×10^5	4.7 M Ω

QRV resistance shown by four digits:

4640	464×10^0	464 Ω
4641	464×10^1	4.64 k Ω
4642	464×10^2	46.4 k Ω

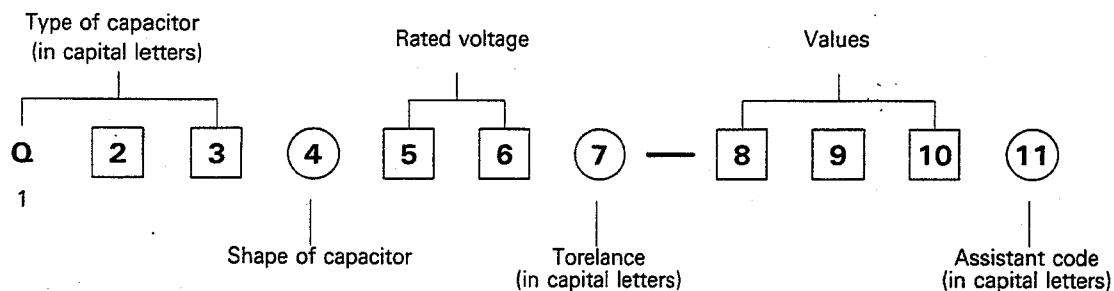

Shape of resistor(sixth digit)

Note: [] indicates flame retardant resistor.

Shape of resistor \ Type of resistor	C	D	F	G	H	M	S	V	W	X
1	[]	[]	[]	[]	[]			[]	[]	
2	[]	[]						[]		
3		[]		[]				[]		[]
4		[]		[]	[]	[]		[]		
5				[]		[]			(L)type	[]
6			[]	[]				[]		[]
7		[]	Lug (B)type					[]		[]
8			Lug (A)type				[]			
9			Lug (C)type	[]	[]					[]

4.1.2 Fixed capacitor coding

Fixed capacitor part numbers are as follows.

Ceramic capacitors

Type of capacitor (first – third digits)		Shape of capacitor(fourth digit)				
Symbol	Characteristics	Mono-direction	Kink lead	Axial lead	Axial forming lead	Chip
QCC	Ceramic	1		4	5	
QCD	High capacitance					A
QCF	High capacitance	1,4	3			8,A
QCS	Temperature compensation	1	3	4	5	8,A
QCT	Temperature compensation			Special coding		8,A
QCV	Ceramic			1	3	
QCX	Ceramic			1	3	
QCY	High capacitance	1,4	3	6	7	8,A
QCZ	Special type			Special coding		
QCB	Ceramic			B	C	

Electrolytic capacitors

Type of capacitor (first-third digits)		Shape of capacitor(fourth digit)				
Symbol	Characteristics	Tubular	Mono-direction	Anti-stress	Forming	Snap-in
QEB	Low leakage		4	5	6	
QEC	Low leakage		4,8,A	9,B	6,C	
QEE	Tantalum(normal)		4	5	6	
	Tantalum(small)		8			
QEF	Chip tantalum		8(chip type)			
QEG	Low impedance		4			
QEK	Miniature type		4	5	6	
QEL	Small type		4	5	6	7
QEM	Small type		4,A	5	6	
QEN	Non-polar	2	4	5	6	
QEP	Non-polar(small)		4,A	5,B	6,C	
QER	Miniature type		4	5	6	
QET	Small type	2	4,A	5,B	6,C	7
QEU	Small type		4	5	6	
QEY	Small type		4		6	7
QEW	Normal	2	4	5	6	7

Paper film capacitors

Type of capacitor (first – third digits)		Shape of capacitor (fourth digit)					
		Tubular	Normal		Flame retardant		
Symbol	Characteristics		Mono-direction	Kink lead	Mono-direction	Kink lead	
QFA	Metalized polypropylene				7		
QFE	Metalized mylar				5		
QFF	Film mica		4				
QFG	Polypropylene film		4	8			
QFH	Metalized mylar	2	4	3	5,7	6	
QFJ	Mylar (special)		4				
QFK	Metalized mylar (small)				5		
QFM	Mylar	2	4	3,7	5	6	
QFN	Mylar (small)		4	3			
QFP	Polypropylene		4	3,8			
QFS	Polystyrene	2	4	3			
QFV	Thin film		4	8			
QFZ	Special type		Special coding				

Rated voltage (fifth and sixth digits)

Sixth digit Fifth digit	A	B	C	D	E	F	G	H	J	K	V	W	X
0						3.15	4.0		6.3				
1	10		16	20	25		40	50	63	80	35		
2	100	125	160	200	250	315	400	500	630		350	450	600
3	1000	1250		2000				5000					

Tolerance (seventh digit)

A	+ 100 % - 10 %	M	± 20 %
F	± 1 %	N	± 30 %
G	± 2 %	P	+ 100 % - 0
H	+ 50 % - 10 %	R	+ 30 % - 10 %
J	± 5 %	X	+ 40 % - 20 %
K	± 10 %	Z	+ 80 % - 20 %

Values (eighth – tenth digits)

Example : Values are in picofarads

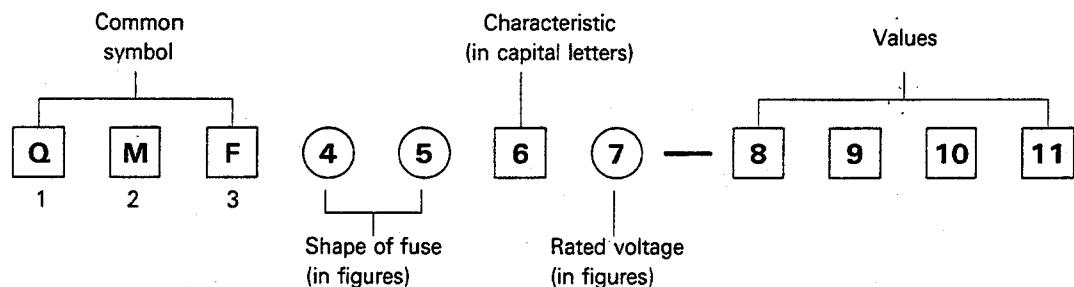

101	10 × 10 ¹	pF	100 pF
102	10 × 10 ²	pF	1,000 pF (0.001 μF)
103	10 × 10 ³	pF	10,000 pF (0.01 μF)
104	10 × 10 ⁴	pF	100,000 pF (0.1 μF)
105	10 × 10 ⁵	pF	1 μF
5R0				5.0 pF

Assistant code (eleventh digit)

- G Small size
- Z Lead taping
- Y Lead taping

4.1.3 Fuse coding

Standard fuse part numbers are as follows.

Shape of fuse (fourth and fifth digits)

51	$\phi 5.2 \times 20$ mm
60	$\phi 6.4 \times 30$ mm
61	$\phi 6.35 \times 31.8$ mm
63	$\phi 6.4 \times 30$ mm with lead wires
66	$\phi 6.35 \times 31.8$ mm with lead wires
00	Special type

Rated voltage (seventh digit)

1	AC125 V
2	AC250 V
3	0.1–1 A : AC250 V
	1.25–6.3 A : AC125 V

Values (eighth-tenth or eleventh digits)

example:	
R63 0.63 A
1R0 1.0 A
2R5 2.5 A
100 10 A
R315 0.315 A
1R25 1.25 A

Characteristics (sixth digit)

Symbol	Fusing Current	Fusing Time	Remarks
A	210 %	Within 2 min.	Anti-rush type(for Europe)
	275 %	0.6 – 10 sec.	
	400 %	0.15 – 3 sec.	
	1000 %	0.02 – 0.3 sec.	
B	210 %	Within 30 min.	Regular fusible type (for SEMKO,Europe)
	275 %	0.05 – 2 sec.	
	400 %	0.01 – 0.3 sec.	
C	135 %	Within 1 hr.	Regular fusible type(for UL,Japan)
	200 %	Within 2 min.	
E	210 %	Within 2 min.	Anti-rush type(for Europe)
	275 %	0.6 – 10 sec.	
	400 %	0.15 – 3 sec.	
	1000 %	0.02 – 0.3 sec.	
J	135 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
M	135 %	Within 1 hr.	Regular fusible type(for UL)
	200 %	Within 2 min.	
R	160 %	Within 1 hr.	Regular fusible type
	200 %	Within 2 min.	
S	160 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
	700 % – 2000 %	Within 0.01 sec.	
U	135 %	Within 1 hr.	Anti-rush type(for UL)
	200 %	Within 2 min.	
	800 % – 2000 %	Within 0.01 sec.

SERVICE MANUAL

RACK MOUNT ADAPTER

S A - K 6 6 U

1. MOUNTING the SA-K66U

- The SA-K66U is a rack mounting adapter kit used to install the RM-G860U.
- Attach the rack mounting adapter to the two sides of the RM-G860U. (see Fig.1-1)

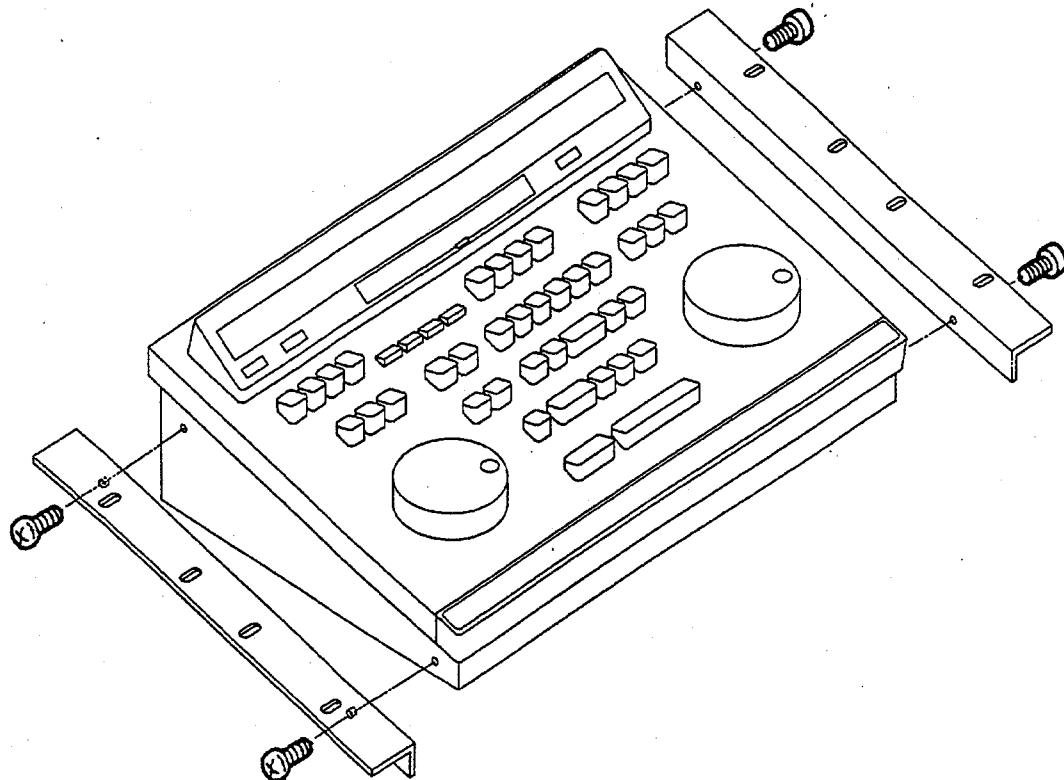

Fig. 1-1 mounting the SA-K66U

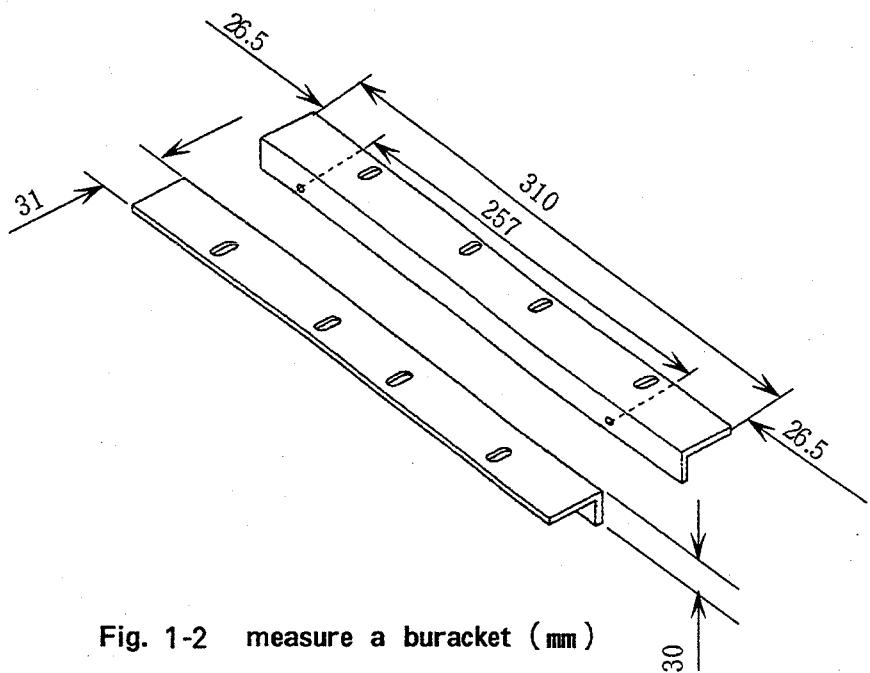

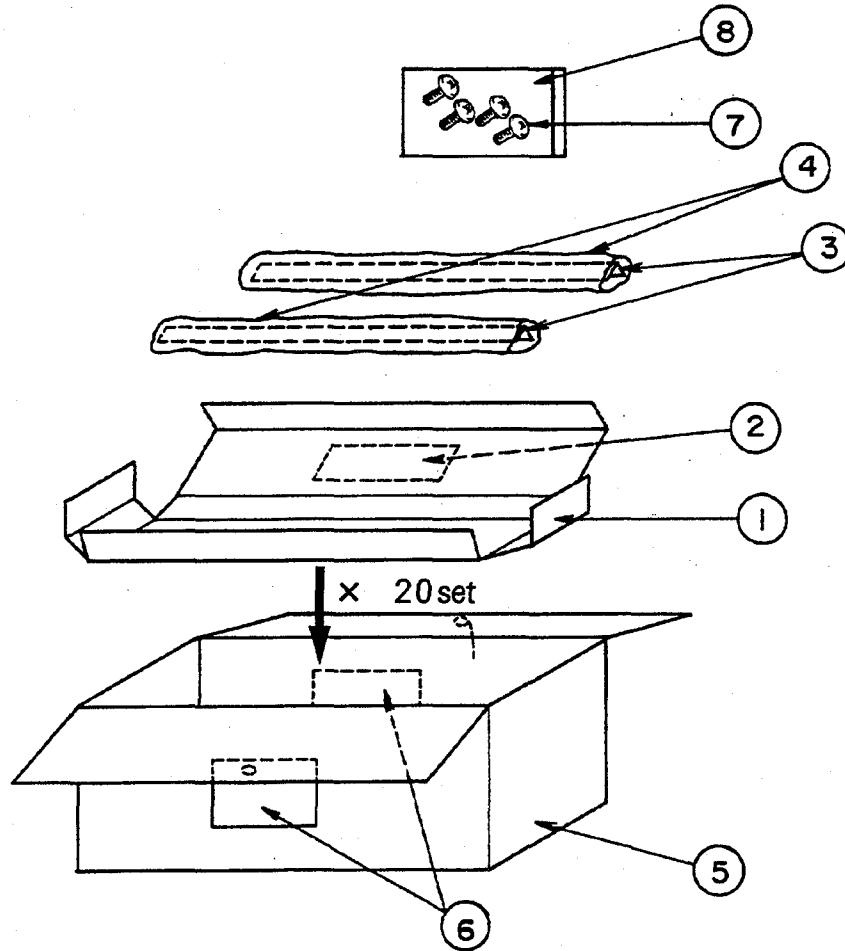

Fig. 1-2 measure a bracket (mm)
